Re: Power Company Clearances for Multi-metered services

To Whom It May Concern:

It has come to my attention that Power Company Clearances have not been being approved for multi-metered services in both commercial and residential installations. Upon installation of the multi-metered services the contractor shall call for the initial Power Company Clearances.

If there is only going to be one unit metered at that time then an approval or disapproval will be given for that unit only. Any other units to be finished at later dates will need to have a clearance given (inspection) for each unit. It will be necessary for the contractors to call for the clearance inspections.

If all of the services have been terminated to each unit, then an inspection will be given to each unit. Depending upon the outcome of the inspection, a sticker will be affixed, either approving or disapproving the installation for each unit with the appropriate address or unit number for each meter.

Also, please remember to attach a hard label to each meter with the address or unit numbers.

Thank you for your cooperation on this matter, and if there are any questions please call.
