	Description: The proposed project consists of a phased replacement of the lab analyzers for St. Peters Health, as well as the installation of individual UPS units for each piece of equipment. Construction documents will reflect required demolition and new construction to support an interim phase where both the existing and new analyzers are operating concurrently during the calibration period, and the final installed condition with the new lab analyzers in place and the old equipment removed. Finishes will match SPH standards. Mechanically, existing systems are intended to be reutilized where possible.						
BCOM24-0163	Commercial Building	Alteration/Remodel/ Renovation	CO Issued	2475 E Broadway St, Helena, MT 59601		Helena City Limit	051888332050500 00

<i>Description: The proposed project consists of the addition of a new CT machine for the St. Peter's Health Medical Group North Clinic. The new suite will receive new paint, flooring, ceilings, artificial sky ceilings and casework. The existing space is already lead lined and it has been decided to leave the existing control room wall (lead lined) with shielded window in place. New cabinets in the existing control room will replace what is currently in place. The existing CT room is plumbed for an exam sink to be included along with additional casework. In order to install the CT in the clinic, an existing opening ("plug") in the north side of the clinic will be opened and then closed again. SPH has requested that windows be installed above the plug and it is suggested to be above the 7'-0" AFF height so that shielded windows are not necessary. Finishes will match St. Peter's Health current finish standards.</i>							
<i>This addition will require modifications to the cooling equipment currently being used to serve the adjacent mechanical room as well as the lab space. New cooling equipment will be provided within the project documents to serve the mechanical room, the lab as well as the CT scan and control rooms. Existing medical gas services that are no longer in service will be demolished, and no new services are anticipated.</i>							
<i>Site specific vendor drawings to be included with CD package for pricing and installation.</i>

<p><i>Description: The proposed project consists of the glazing enclosure of the central nurse station in the Emergency Department. New glazing will surround the perimeter of the nurse station providing a limited sound separation between the ED staff and the adjacent patient rooms while still providing visibility between the two locations. The glazing will extend from the top of the casework to the soffit/ACT ceiling above. Windows will be ¼" tempered in clear anodized aluminum frames.</i></p> <p><i>A relocation of sprinkler heads is not anticipated.</i></p>

	Description: We will completely remove the existing shingles from the house and install a new roofing system designed for long-term durability and weather protection. This includes Owens Corning True Definition architectural shingles, matching starter and hip/ridge shingles, an ice and water barrier at eaves, valleys, and other vulnerable areas, and synthetic underlayment for added moisture protection. All materials are top-quality and meet or exceed manufacturer recommendations.						
	All roof flashing will be replaced, including step flashing, roof-to-wall flashing, valley metal, and drip edge. The house's ventilation will be balanced with the existing soffit vents by installing new ridge vents to improve airflow and meet building code requirements.						
	We will trim the tree on the West side near the gutter and install gutter guards in this gutter section. The TV antenna and Satellite Dish will be reinstalled at the same locations and in the same directions. During the roof tear-off, we will use a Catch-All cover system to protect the side of the house and surrounding plants. At the end of the workday, the yard will be fully cleaned.
