EXECUTIVE SUMMARY

In March 2020, the City of Helena (the “City”) hired Better City and Dowling Architects to assist the City with the creation of a Downtown Renewal Vision for Cruse Avenue (the “Plan”). This Executive Summary section contains the key findings from each section of the Plan including the history of Cruse Avenue, reviews of prior plans, key stakeholder interviews, land and industry analyses, project assessment including open house feedback and preferred alternatives, policy recommendations, and action steps.

The scope of work of this Plan includes the Cruse Avenue corridor beginning at the Park Avenue intersection and extending to the Lawrence Street intersection. Excluded from this Plan is the section of Cruse Avenue between Lawrence Street and Neill Avenue due to project dependencies associated with transportation planning at the five-point intersection (the intersection of Neill Avenue, Helena Avenue, Last Chance Gulch and Cruse Avenue). It is recommended that a small area plan be conducted to evaluate the potential for redevelopment and realignment of infrastructure in this area.

History of Cruse Avenue

- Cruse Avenue is a remnant from a master transportation plan developed in the late 1960’s under the Model Cities Program.
- This plan involved the construction of a connector from I-15 to Highway 12, aligned at the southern edge of downtown along with an interchange to provide better access and improve commercial viability for downtown.
- North/south access was to be provided by a new arterial, Cruse Avenue, connecting the downtown interchange to Neill Avenue.

- In anticipation of the new interchange, initial phases of Cruse Avenue were constructed, which included the intersections at Park Avenue, Cutler Street, and 6th Avenue, with the extension to Neill Avenue built a few years later.
- Ultimately, the I-15 to Highway 12 connector did not receive adequate community support and was not pursued, leaving Cruse Avenue as a remnant arterial.

Synthesis of Prior Plans—Key Findings

Helena Growth Policy

- The Helena Growth Policy identified what the City strives to be recognized for along with their guiding values. Any future plans should align with these priorities.
- The draft vision statement is: “Helena celebrates its past, enjoys its present, and plans its future to ensure that its growth is beneficial, its environment is clean, and its economic stability assured while maintaining its outstanding natural setting, quality of life and sense of community.”

Downtown Neighborhood Plan

- The Downtown Neighborhood Plan identified issues and goals regarding Downtown connectivity, business access, walkability, bike routes, parking, aesthetics, and vibrancy.
- The Retail Market Analysis (Appendix B) conducted in 2016 found demand for up to 142,900 SF of additional development.
- Downtown districts include Great Northern District (business and entertainment), Last Chance Gulch (retail core), and Fire Tower District (entertainment, recreation, history, arts, and culture).

Commented [AH1]: Staff to provide updated language.

- Number of lanes should be reduced to two-lanes, one going each way, and intersections should be improved.
- Develop bike network and address pedestrian crossing barriers.

Downtown Helena Urban Renewal Plan

- The City’s Urban Renewal Plan reviews the areas qualifications as an Urban Renewal District, along with key issues regarding the street layout of Cruse Avenue
- Recommendations include revising downtown development code, promoting redevelopment of underperforming properties, and encouraging downtown housing.
- There is adequate parking downtown, yet there are opportunities to better manage parking to improve utilization.

Key Stakeholder Interviews—Recommendations by Topic

- **Downtown:** Modernize and make vibrant with things to do. Put retail and services near residential. Bring back the creek.
- **Businesses:** City needs commercial tax base; there used to be lots of small retailers. Attract those again with a nice downtown (not chains). Could the Shriner’s building and others be demolished? A challenge is the cost of redevelopment of old buildings.
- **Housing, Affordability:** Housing is important to bring grocery and restaurants, need a comprehensive design. Need variety of affordable housing. Economic impediments are subsidies, developers, and matching market values people can support. Affordable includes both owning and renting.

- **Walkability, Sidewalks:** Connectivity is biggest problem downtown—it needs to be walkable. Think ahead 50 years and design development to include pedestrian access and bike lanes.
- **Bikes, Trails:** There is support for walkability and bike-ability. Make downtown a spot to walk or bike to. Helena is becoming a hub for biking trails.
- **Parking:** There is plenty of free parking, although it is often mentioned as an issue.
- **Traffic:** There is a preference for two-lane streets.
- **Cruse Avenue:** There is wasted potential on Cruse which could provide green space and housing—right now it is a sea of asphalt. South of Broadway there is almost no traffic. It could be the backyard of the downtown. Could it become a modified bike trail? There is opportunity to reduce the width. The City owns a good part of the land, so could be a catalyst for changing it.

Land and Industry Assessment

- Market demand for commercial uses along Cruse Avenue is limited due to the proximity to competing commercial nodes and lot sizes. Land use should be complementary and supportive to the existing downtown uses which would indicate little to no commercial uses.
- Residential product type is in short supply and attainable housing is in high demand. Adding new residential product to the Cruse Avenue corridor will improve the streetscape and aesthetic.
- Attached single-family uses such as townhomes is a suitable product type considering available lot configurations. Townhomes also fit the desired urban scale and will maintain visual sightlines into the downtown and surrounding neighborhoods along the Cruse Avenue corridor.

Commented [AH2]: Staff indicated this was completed. Would need to understand how these changes impact Cruse.

Design elements
Provide flexibility in residential uses
Retail in transitioning zone

Project Assessment

Initial Alternatives

- Keep vehicular access but reduce the ROW to add space for bike lanes and pocket or linear parks, new residential offerings, and remove the aged neighborhood center building and relocate tenants to improve circulation between Cruse Avenue and Last Chance Gulch;
- Turn Cruse Avenue into a linear park focused on bikes and pedestrians and supported by residences with no vehicular access, remove the aged neighborhood center building and relocate tenants to improve circulation between Cruse Avenue and Last Chance Gulch;
- Create a hybrid approach of the two alternatives that provides both a linear park along less frequented sections of Cruse Avenue and maintains vehicular access along more active areas with active transportation improvements and new residential offerings.

Open House Feedback

- Few supported the concept of a linear park along Cruse Avenue as stakeholders:
 - preferred to maintain vehicular access as a convenient and quick route to access downtown compared to other alternative routes;
 - were concerned of the impact closing Cruse Avenue to vehicular traffic would have on traffic volume in surrounding neighborhoods;
- Removing the aged neighborhood center from its current location to improve circulation between Cruse

Avenue and the walking mall and relocating tenants received conditional support so long as:

- A new multi-story building should be constructed on the parking lot of the existing location with tuck-under parking provided along with access to the building from the street-level at Cruse Avenue and the walking mall;
 - Existing tenants would then relocate into the new facility, the old facility would then be demolished, and improvements to accessibility and circulation undertaken between Cruse Avenue and the walking mall;
 - Any new facility would provide adequate space for the programming needs of existing tenants; and
 - The project would be funded by the City and other parties to subsidize the development costs and to keep rental rates in-line with current economics;
 - Additional community conversations are needed to determine the future of the existing neighborhood center and plans for a new facility; and
 - Present both options in the next public meeting to 1) keep the neighborhood center as it is or 2) develop a new facility on site.
- The alternative that received the most support was to keep vehicular access, reduce the ROW to add space for bike lanes and pocket or linear parks, and add residential product along the corridor.

Preferred Alternatives

- Keep vehicular access, reduce the ROW to add space for bike lanes and pocket or linear parks, and add residential product along the corridor. Included are two options to leave the Neighborhood Center building as is or relocate to a new facility at their existing location.

Policy Recommendations

- Discussions with stakeholders highlighted a number of impediments to private sector investment in downtown Helena that could be ameliorated by enhancing incentive policies to include:
 - Strengthening the State Historic Tax Credit;
 - Expanding uses for Tax Increment Financing to include vertical construction costs; and
 - Consider adopt a State New Market Tax Credit program.
- The State of Ohio has adopted policies aimed at facilitating investment by twinning state and federal incentives that could be a model for Montana to consider.

Action Plan

- Key next steps include addressing
 - Cruse Avenue and Cutler Street ROW abandonment / private property owner purchase rights;
 - Infrastructure extensions to planned re-development sites;
 - Economic structures to accommodate attainable housing, disposition of City property for redevelopment;
 - Further stakeholder discussions regarding replacement of the aged Neighborhood Center;

- Adjustments to State incentive policies to facilitate private sector investment in the downtown;
- Conduct outreach and recruitment for the development of supportive neighborhood commercial uses as well as adaptive reuse of existing buildings along Cruse Avenue; and
- Engineering of planned improvements.

HISTORY OF CRUSE AVENUE

The following historical information was taken from the “Final Environmental Report for Project No. M5815(1) . Cruse Avenue Sixth Avenue to Neill Avenue” conducted in late 1981.

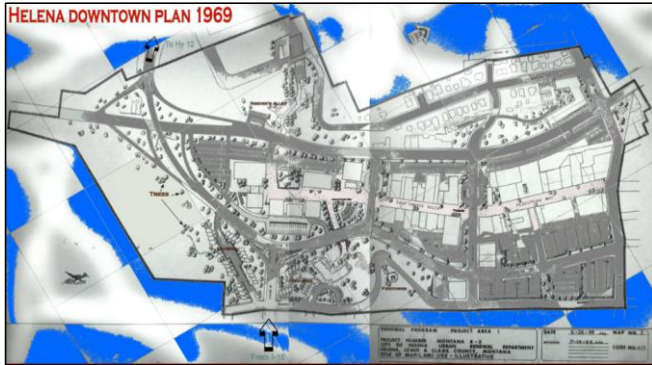

The City of Helena received a grant under the provisions of the Demonstration Cities and Metropolitan Development Act of 1966 to begin one year of planning as one of 147 Model Cities in the United States. The program began in July 1968 and was followed by four Action Years, the final year terminating in June 1973. Between 1969 and 1981, \$47.0M was spent in the downtown area comprised of \$22.7M and \$24.3M of Federal and private funds, respectively.

“In 1969, “public hearings were conducted on the Last Chance Gulch Urban Renewal Plan. Major features of the Traffic Circulation and Public Parking elements of the plan were:

- Relocate Jackson Street to the east and construct a two-way four-lane facility (Cruse Avenue [parts of which used to be named Allen Street]).
- The Urban Renewal Project extended north to 6th Avenue; however, it was recommended that the Jackson (Cruse Avenue) extension be completed to Neill Avenue.”

Figure 1 is a map of the 1969 Helena Downtown Plan. “The Original Plan created in 1969 included the “ring road” using Cutler Street as the I-15 entry and the route south of Reeder’s Alley that looped around Mount Helena to Highway 12.” Major differences between the plan and what is currently observed in the built environment include:

1. The highway interchange and overpass of Park Avenue at the southern end of Cruse Avenue connecting through to Highway 12.
2. Cutler Street connecting through to I-15 with alignment to Winnie Avenue. Winnie and Broadway Avenues were to be reconfigured to one-directional road couplets with an interchange at I-15.
3. The access road to the library continues through the block and intersects Cruse Avenue.
4. The Wong Street configuration includes a curb cut along Cruse Avenue and no circulating connection to the library access road.
5. The Consistory Shrine Temple Association buildings (erected 1880 Historic Ming Opera House) used as a fraternal hall at 15 Jackson Street were to be demolished and replaced with surface parking.
6. Access to Fire Tower Park was to be improved by extending Warren Street in a curvilinear design through the block, connecting into Broadway Street.”

SOURCE: Pamela Attardo, Helena/Lewis & Clark Co. Heritage Preservation Officer

Figure 1—1969 Downtown Plan

SOURCE: helenahistory.org – Sean Logan

Figure 2—1940s View of Cruse Ave

The following historical summary was provided by Pamela J. Attardo, Helena/Lewis and Clark Co. Heritage Preservation Officer:

“By 1972 things had changed. Negotiations for the Shrine Consistory and old Helena Light and Traction buildings on Jackson Street failed, forcing a re-route of the eastern loop street. Jackson survived as a street and the loop was renamed Cruse Avenue.”

“Historic preservation concerns and regulations prompted reconsideration of certain demolitions, staving off a few and delaying others. The darkly outlined structures—Brewery, Denver Block, Parchen, State Publishing, Independent Record, Colwell, VFW, Sheehan’s, Wheat, Murphy and Walker buildings—were questionable historical survivors, having structural and other liabilities but were kept in the running for retention. Few were purchased. The plan was simplified by these and other practical reasons, leaving more structure and less roadway in downtown.”

SOURCE: helenahistory.org

Figure 3—1950s View of Cruse Ave

“Details in the plan were worked out. A historical theme developed. Again using European precedent, artifacts from demolished buildings were to be incorporated into street furniture and other structures. The gulch’s old stream from 1864 was symbolically recreated along a block of the “pedestrian way” and themed statuary commissioned.”

“Parks, though reduced in size, remained as important features. Housing structures were reduced. A large apartment complex would be built south of the Bluestone. Displaced residents were parceled out to “scattered housing” constructed by Model Cities in various area locations.”

“The hotel and convention center project that had started redevelopment downtown, remained as a central component to

the scheme. Its placement would remove the historic Wheat Block, a large and memorable old Main Street presence.”

“Private investment boosted the outlook for success. Notorious “Dorothy’s” and the Dunphy, Loranz, and Goodall Blocks across the street were largely privately developed. New buildings like the Arcade Block, designed to complement their historic neighbors, were successfully financed.”

“the” “Ring Road” idea died. Developers and homeowners along its route objected to traffic it would bring. As a result, downtown would remain inaccessible by direct means and suffer accordingly.”

Subsequent to this plan, the Helena Labor Temple Association and Chamber of Commerce buildings were constructed in 1972 and 1995, respectively. These buildings occupy part of the parking lots east of Cruse Avenue between Broadway and 6th.

SOURCE: helenahistory.org

Figure 4—1950s View of Cruse Ave

“The overall goal for the Last Chance Renewal Project was based on the completion of a continuous access route around the downtown area ...[and] to improve the accessibility to and from the downtown area.”

It would appear that an initial phase of Cruse Avenue was constructed from Park Avenue to 6th Avenue in 1970 with an extension from 6th Avenue to 11th Avenue and Neill Avenue occurring sometime after 1981.

“In 1975, the Helena Urban Transportation Study was adopted by the Helena City Commission. The final priorities for the current projects [identified] Cruse Avenue - 6th Avenue to Eleventh Avenue-priority number 4”. In 1979 an update to this Study was commissioned which raised the Cruse Avenue extension to priority number 1. In 1980, a consultant was hired to conduct the environmental impact study for the extension.”

SOURCE: helenahistory.org

Figure 5—1950s View of Cruse Ave

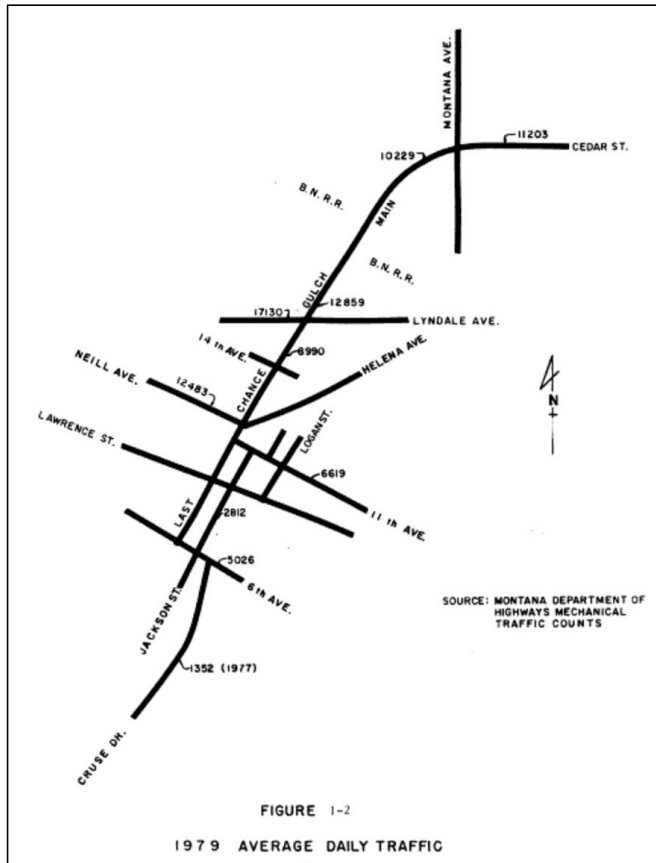

SOURCE: helenahistory.org – Scott Nelson

Figure 6—1960s View of Cruse Ave

“In 1977 an engineering firm was hired to establish a preliminary alignment for Cruse Extension with emphasis on the connection to 11th Avenue and Neill Avenue. Alternate 1 of this report was considered by the City Staff as the best overall solution.” During the process of developing a Final Environment Report over “25 alternate routes and various intersection configurations were reviewed.” Four viable, build alternatives were presented in the draft EIS. The average daily traffic count and street grid from 1979 is shown in Figure 7.”

See Appendix A for articles which provide additional historical context for decisions concerning Cruse Avenue

REVIEW OF PRIOR PLANS

The documents listed below were studied and were incorporated into a synthesis of prior plans, ensuring that the new plan for Cruse Avenue is congruent with prior plans. (See Appendix A for details of each plan that are relevant to vitalizing Cruse Avenue):

- Helena Downtown Urban Renewal Plan, adopted 29 October 2019;
- City of Helena Growth Policy adopted 29 Jun 2020. Appendix A & B.
- Downtown Study Area –Statement of Blight, City of Helena, dated 15 March 2018;
- Downtown Helena Master Plan 2016-2036, adopted 17 October 2016 as the Downtown Neighborhood Plan;
- Appendix A – Existing Conditions Report;
- Appendix B – Market Analysis Report;
- Appendix C – Public Outreach Summary;
- Appendix D – Funding Sources; and
- Greater Helena Area Long Range Transportation Plan – 2014 Update

The documents listed below were also reviewed for relevant contextual information:

- Montana Economic Development Report 2019;
- Montana Economic Report 2019;
- Comprehensive Economic Development Strategy 2019-2023 (for Broadwater, Lewis and Clark, and Meagher counties);
- Tri-County Housing Needs Assessment, dated 30 Oct 2018 (for Broadwater, Lewis and Clark, and Meagher counties); and

- Helena Climate Change Task Force Action Plan 2009.

SOURCE: City of Helena Growth Policy, pg 3-6

Figure 8—City of Helena

Helena's prior plans were reviewed to determine the City's vision, values, and goals to provide context for the vitalization of Cruse Avenue. Similarities and priorities from Helena's prior plans are synthesized into the following key points.

VISION (2019 Helena Growth Policy, Chapter 1, pg.11)

Helena celebrates its past, enjoys its present, and plans its future to ensure that its growth is beneficial, its environment is clean, and its economic stability assured while maintaining its outstanding natural setting, quality of life and sense of community.

The City of Helena strives to be recognized for:

- A healthy, vital economy that benefits all,
- Quality municipal services,
- Balanced and beneficial growth,
- A world-class natural setting and recreational opportunities,
- Clean, safe, and sustainable natural resources,
- A vibrant arts cultural and civic environment,
- A vital, active downtown, rich in history, and a source of intense community pride, and
- Citizen involvement and engagement in all matters.

COMMUNITY VALUES

Community: Helena is a safe and secure place to live, work and play, with a stable and friendly environment that encourages citizen involvement.

Leadership: Helena values leadership that respects differing views, models integrity, and implements community goals.

Environment: Helena is an environmentally aware community that preserves, conserves, and appreciates its distinctive open spaces, natural resources, habitats, parks, and outdoor recreation.

Economic Development: Helena encourages economic development that safeguards the environment, while promoting community prosperity.

Diversity: Helena is a community for all people, offering diverse cultural and educational opportunities, with varying land uses and unique neighborhoods.

Accountability: Helena is dedicated to promoting fiscal responsibility, managed growth, responsive community services and an open and fair government.

Commented [AH3]: Staff to provide updated language.

SOURCE: Helena Downtown Master Plan, pg 3

Figure 9—Fire Tower

GROWTH POLICY GOALS

The 2019 City of Helena Growth Policy has goals and objectives, which are summarized here, and which serve as guiding principles for vitalization of Cruse Avenue.

Population and Economy: Helena expects relatively modest growth. The plan proposes a Neighborhood Centers concept as well as to:

- Encourage clustering of allied business types for efficiency and sharing of practices,
- Adopt zoning patterns that allow ample locations near infrastructure and quality housing,
- Sustain the area’s scenic, cultural, and recreational attractions, and
- Invest in “green” building and renewable energy.

Land Use, Housing, and the Natural Environment: Focus growth patterns within the city and promote infill and advance the Neighborhood Centers Concept, all of which will:

- Promote fiscal sustainability through reduced service costs,
- Preserve open space and recreational features,
- Enhance civic activities,
- Support economic growth,
- Reduce vehicular miles traveled,
- Boost housing diversity,
- Accommodate Helena’s growing population, and
- Maintain air and water quality, conservation, and hazard reduction while growing.

Public Facilities, Services, and Transportation: Seek tight integration of services, supporting compact land use:

- Invest in target maintenance and system upgrades,
- Support parks and open spaces, and
- Arrange the transportation network to optimize land use and connectivity.

Community Culture and Design: Recognize the incredible value inherent in Helena’s unique culture and physical character:

- Ensure land use patterns add to local “livability”,
- Support a wide range of arts and cultural assets, educational and recreational opportunities,
- Preserve the historic downtown as the “heart” of Helena,
- Encourage residents to be an active part of the community’s culture, and
- Preserve Helena’s unique setting, which offers breathtaking views and access to recreation.

SOURCE: City of Helena Growth Policy, pg 3-10

Figure 10—Neighborhood Centers

This diagram shows how proposed Neighborhood Centers may vary according to desired function and relative size. Some centers

may evolve as "Neighborhood", "Community" or "Regional" in scale.

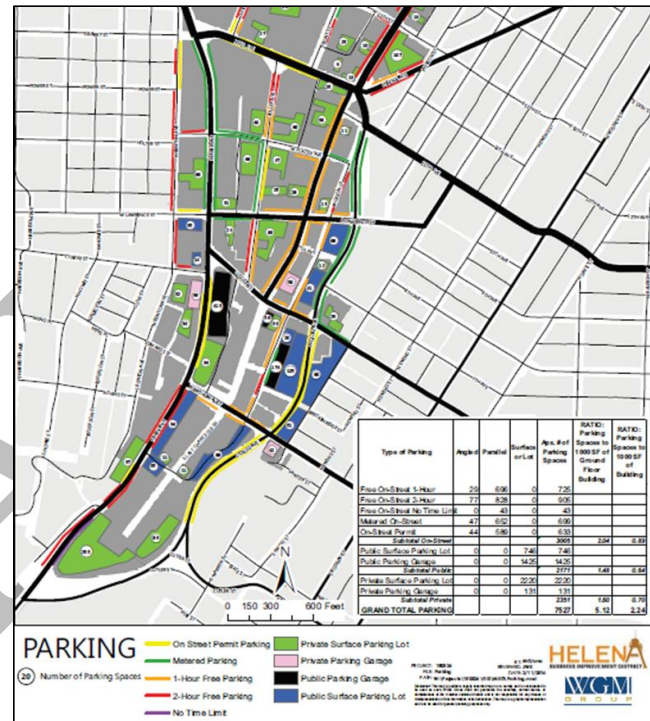

CRUSE AVENUE AREA ISSUES & OPPORTUNITIES

Points and suggestions from the prior plans, primarily from the Helena Downtown Urban Renewal Plan and the Downtown Helena Master Plan, are compiled by category in this section.

Parking

In the recent past, the City invested in five different parking structures and numerous surface lots to provide an adequate supply of parking for Downtown. While there is enough parking to support current demand, there are opportunities to better manage parking to improve utilization and benefit, some examples of which are:

- Price parking to create high turnover in desirable and convenient locations.
- Meter all on-street parking within Downtown to manage time limits and pricing.
- Provide free 20-minute "quick stop" parking.
- Reinvest revenue from parking meters in maintenance and beautification.
- Offer first hour free parking in garages and surface lots utilizing pay-as-you leave technology.
- Integrate parking wayfinding signs for pedestrians and vehicles.
- Provide well-lit, well-maintained sidewalk routes to get to and from the parking lots.
- End parking permits for neighborhoods within easy walking distance of Downtown.

SOURCE: Downtown Neighborhood Plan, Appendix A, pg 21

Figure 11—Parking

Street Network

Past projects placed a high priority on leaving Downtown. The majority of streets have good capacity and level-of-service, making driving Downtown relatively easy. However, wide multi-lane streets affect walkability and one-way streets affect the viability of Downtown businesses.

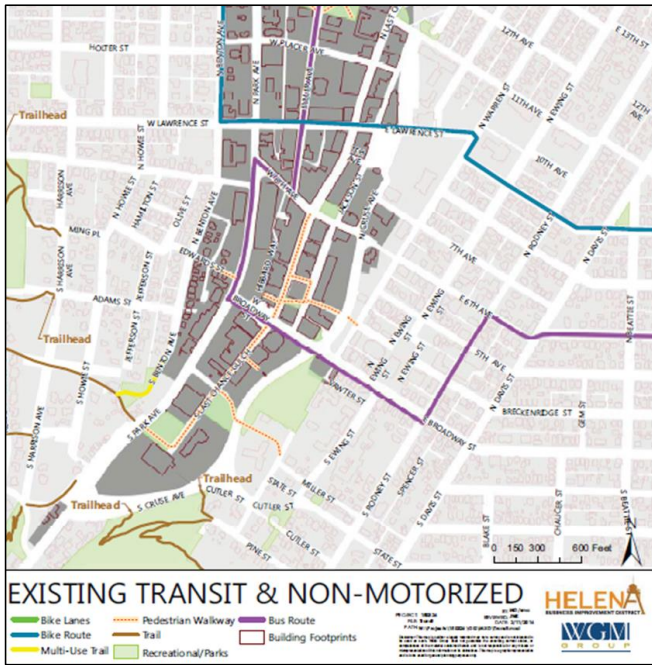

SOURCE: Downtown Neighborhood Plan, Appendix A, pg 23

Figure 12—Existing Street Network

- Reduce the number of lanes to two-lanes, with one-lane in each direction.
- Convert one-way streets to promote lower speeds and easier access.
- Simplify intersections to reduce crossing distances and eliminate right-turn slip lanes.
- Fix the five-point intersection of Neill, Last Chance Gulch, Helena, and Cruse Avenue.
- Convert Cruse Avenue to a local street. The majority of Cruse Avenue carries less than 2,000 cars per day. Use its wide right-of-way for parking, sidewalks, trails, and landscaping to support new development rather than a high-volume traffic corridor.

Bicycles & Pedestrians

- Address pedestrian crossing barriers with curb bulbouts, refuge medians, and high-contrast crosswalk markings.
- Invite people to keep walking.
 - Add buildings along key corridors to eliminate gaps in the urban form,
 - Orient buildings to the street,
 - Paint, engrave, or inlay sidewalks and streets to show pedestrian routes, and
 - Connect points of interest, public art, and other pedestrian attractions.
 - Review and improve way-finding signage
- Develop a comprehensive Downtown bike system, including bike routes, bike lanes, multi-use trails, protected bikeways, bike racks, and tuning stations.

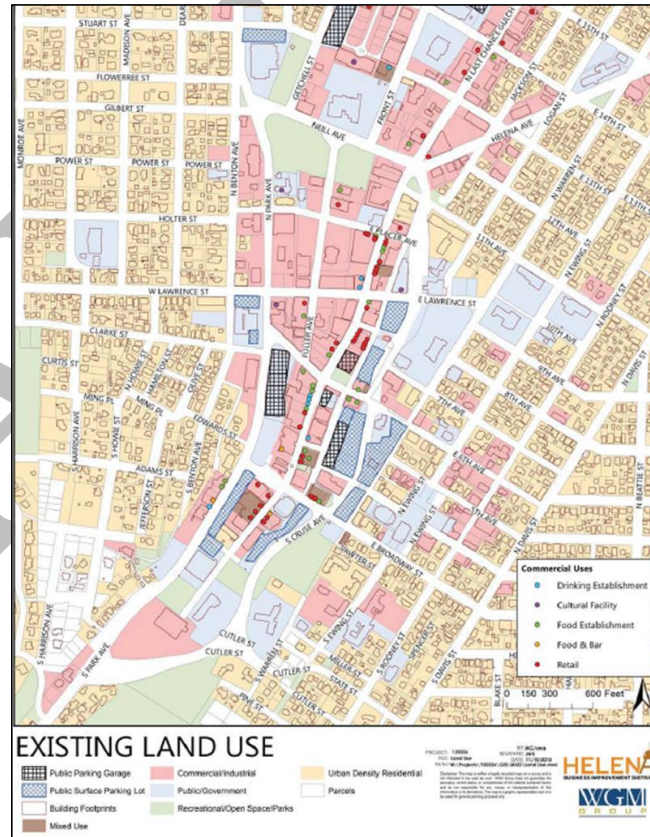

SOURCE: Downtown Neighborhood Plan, Appendix A, pg 25

Figure 13—Existing Transit & Non-Motorized

Redevelopment

Redevelopment opportunities abound. Properties where the land value exceeds the value of improvements make up over 31 percent of the Plan Area. Building values of 273 properties (113 acres) exceed the land value, a number of which are city-owned surface parking lots that could be converted to new downtown buildings with structured parking. One redevelopment

opportunity is the Cruse Avenue right of way between Cutler St. and Park Ave.

SOURCE: Downtown Neighborhood Plan, Appendix A, pg 12

Figure 14—Existing Land Use

LAND USE ASSESSMENT

The downtown area parallel to and including Cruse Avenue has considerable unmet potential. A vibrant downtown could encourage existing businesses to upgrade appearances and might attract new investment, with downtown becoming a destination attracting more people to relax, shop, and live there.

The most prominent concept continually suggested by stakeholders is the need to provide affordable residences downtown. Map 3 shows that much of the land along Cruse Avenue is already owned by the city and could be made available to developers as part of a comprehensive plan for the whole downtown area.

SOURCE: Seattledreamhomes.com

Retail amenities, existing and new, would be developed in tandem with construction of residences and green spaces. This need not be done all at once – concepts could be implemented in phases, with experience and understanding gained from each phase being applied to the next phase, allowing appropriate flexibility in implementing the plan. Map 4 shows examples of potential phases

of development, potentially starting at the southern end of Cruse Avenue

SOURCE: Downtown Helena Master Plan, Appendix A, page 11

Map 1—Landowners

Map 2—Potential Development Phases

A variety of housing is proposed, including affordable and market rate housing. One market segment is people who desire to downsize and move downtown. Another segment is young people who struggle to obtain housing in the current market environment. There is likely to be demand for smaller homes with amenities within easy walking distance. Townhomes could be a good alternative to traditional housing due to constraints on lot depth. Parking can be provided underneath the residences where

appropriate or leased from City owned lots. There are a number of potential sites for townhomes or multi-family dwellings, but topography and the preservation of existing park space eliminates most of these sites for multi-family development. The need for supportive neighborhood commercial uses favors a small grocery or pharmacy.

The land uses that are most feasible based on existing uses, topography, and lot depth includes townhomes along Cruse Avenue, additional apartments by the ME Anderson site (owned by the Helena Housing Authority), and the potential of small neighborhood commercial services (such as a grocery store / pharmacy) on the City-owner parking lot at the southwest corner of the intersection of Lawrence Street and Cruse Avenue.

INDUSTRY CLUSTER ANALYSIS

The *Montana Economic Development Report 2019* from the Governor’s Office of Economic Development provides insights on some of the state’s key industries, some of which have been provided below for those industries that potentially connect to Helena’s downtown.

Small Business & Entrepreneurship:

“Generally, Montana’s businesses are small, and the state has a larger share of small businesses compared to other states. In fact, 91.2 percent of all businesses in the state are considered small...with fewer than 20 employees. These small businesses provide more jobs and wages compared to other states, indicating Montana has a higher dependence on small business than most other states. By industry, retail trade (6.4 percent of all employment), accommodation and food services (4.8 percent),

and construction (4.2 percent) have the greatest number of people working in small businesses.”¹

The City of Helena should also do what it can to encourage the kinds of downtown businesses that can export goods and services domestically to broaden their customer base, and not be as dependent on the local population.

The vision for Cruse Avenue includes both constructing new residences downtown as well as making downtown more accessible to all residents of Helena and connected to surrounding neighborhoods. This added vibrancy should attract new businesses to downtown, such as shops, restaurants, and small offices.

Helena, in coordination with community partners like the Montana Business Assistance Connection, can support small local businesses by encouraging them to take advantage of venture capital and entrepreneurial support programs, like Blackstone Launchpads and Early Stage Montana, and keep the development of the entrepreneurial ecosystem a priority. By supporting and encouraging small businesses and entrepreneurs to locate in downtown, the added vibrancy and attending investment will create an enhanced quality of life for the residents living in new housing along Cruse Avenue.

Technology Sector: “According to the Montana Department of Labor, Montana added 153 Information Technology firms in 2017. That year, the tech industry also employed over 15,000 workers and attracted over \$83 million in venture capital investment. This represents a 40-fold increase in venture capital over just a few years prior...Nearly one quarter of all new hires in the IT sector are coming from outside Montana...[and] recruitment from

outside Montana will become an increasingly large component of the hiring strategy.”²

According to a variety of recent reports, the way the COVID-19 pandemic is changing daily life may cause people to consider moving away from big cities into smaller ones, with businesses following. Helena, with a revitalized downtown, could well be attractive to remote workers, remote offices, and fledgling businesses, all of whom will require robust internet connections. “Work hard, play hard” is often the accepted norm among technology startups, which typically require little office space initially or can even be started from home (or in one’s garage, as with Apple). For many of them, Helena’s outdoor recreation assets could be a significant draw.

¹ Montana Economic Development Report 2019, pg 26

² Montana Economic Development Report 2019, pg 30

According to Cushman & Wakefield, one of the world's largest commercial real estate firms, post-Covid-19, the workplace will no longer be a single location but an ecosystem of a variety of locations and experiences to support convenience, functionality and wellbeing. This variety of locations could include smaller office hubs in downtown Helena, which would provide convenient commutes and access for the residents living in new homes built along Cruse Avenue.

Tourism: "In 2017...amongst all ad-exposed travelers who took a trip to Montana, over 90 percent were influenced by Montana ads... In fiscal year 2018, MOTBD's tourism grant program invested \$750,000 into tourism- and recreation-related projects in 27 communities across Montana... Grants supported \$1.8 million of investments into projects aimed at strengthening the visitor experience and allowing Montana's vibrant and charming small towns to tap into the greater tourism economy."

"According to the Institute for Tourism and Recreation Research at the University of Montana, in 2017, 12.5 million non-residents visited Montana, adding \$3.4 billion to the state's economy, supporting jobs for 53,380 hardworking Montanans, and contributing \$204.5 million to state and local taxes."³

The IT as well as tourism and outdoor recreation industry can be directly supported by the development of Cruse Avenue. The development opportunities envisioned in this report make Cruse Avenue more accessible to pedestrians and bicyclists to create a welcoming atmosphere for people who enjoy the outdoors. In addition to providing high quality of life for residents, these changes create appeal for visitors and businesses who seek these types of amenity offerings.

Remote Work

"Montana has seen a notable rise in remote workers, particularly in IT-related fields. Programmers, graphic designers, customer service, sales, marketing, and other professions are now commonly able to work remotely either part or full time... Remote and freelance workers are an increasingly important component of rural economies. This element of Montana's employment mix is rapidly growing, and the state is working to enhance the sector in many ways."¹

Improvements in broadband and fiber infrastructure along Cruse Avenue could position the City to capture remote workers in high wage professions. In addition, remote work trends may influence how the new townhome products along Cruse Avenue are designed. A home office may be a compelling feature for a homebuyer. Particularly one that is well designed to accommodate a desk, video calls (i.e. soundproofing, nice background, etc.), multiple computer screens, and other needs of the remote worker.

ANALYSIS OVERVIEW

Lewis and Clark County's industry clusters (city-level data is unavailable) were analyzed using the shift-share and location quotient methodologies. The purpose of the analysis is to identify local and regional industry characteristics that may indicate demand for new office development in the downtown including Cruse Avenue.

The following are components of the analysis:

State Share: The portion of job growth that can be attributed to general economic growth throughout the State. It is calculated by

³ Montana Economic Development Report 2019, pg 38

multiplying the number of jobs created in each industry by the State's overall growth rate. For example, a change in real estate agents may be the result of the State's overall economic growth (or decline), and not because of local industry or regional trends.

Total Job Change: The number of jobs (full-time and part-time) gained or lost in an industry during the period analyzed (2014-2018); estimates from Bureau of Economic Analysis.

Industry Share: The industry share represents the portion of job growth that is attributable to the industry's state-wide expansion or contraction. It is calculated by multiplying the number of jobs in the County at the beginning of the period (2014) by the State's growth rate for a specific industry and taking out the State Share. This share shows expansion or contraction trends for a given industry that cannot be explained by the State Share.

Photographer: David Paul Morris/Bloomberg

Regional Share: This is the most important component of job growth for the local analysis. It is calculated by subtracting the industry share and the state share from the total number of jobs gained or lost in the selected industry at the local level. This highlights the change in employment that is attributable to the County's economic conditions. Regional share highlights aspects of the region that may be working with or against the other trends and can reveal the strengths or weaknesses of the area for selected industries.

EMPLOYMENT SHIFT SHARE ANALYSIS

According to BEA estimates, the industries which have experienced the largest amount of employment growth between 2014 and 2018 were "Real

Estate & Rental & Leasing" (increase of 415 jobs) and "Accommodation and Food Services" (increase of 336 jobs). Growth in both industries was largely due to industry and state factors.

The next two categories of highest growth were “Manufacturing” (increase of 232 jobs) and “Transportation & Warehousing” (increase of 226 jobs), both of which had growth due to industry, state, and regional factors.

“Government & Government Enterprises” saw significant job losses over the period (decrease of 477 jobs). Other industries with a decline in employment include “Wholesale Trade” (decrease of 95 jobs), “Educational Services” (decrease of 35 jobs), and “Mining, Quarrying, & Oil & Gas Extraction” (decrease of 30 jobs). The decline in these industries is a combination of regional and industry factors.

This net loss in government employment within the County indicates a softening in demand for office space in downtown Helena, it being a job center for local, State and Federal employees. Based on this data, redevelopment of Cruse Avenue is unlikely to include office space.

SOURCE: BEA, Better City

Figure 15—Lewis & Clark County Shift Share Analysis (2014-2018)

EMPLOYMENT LOCATION QUOTIENT

The new vision for Cruse Avenue, along with other improvements envisioned for the rest of downtown, should greatly enhance the attractiveness of downtown Helena, and specifically Cruse Avenue, to bringing in new residents and new businesses. The analysis below suggests which businesses should be targeted.

An employment location quotient (LQ) analysis is a method of quantifying the concentration of an industry cluster in an area when compared to the State averages. This allows the County to see if it has a highly concentrated cluster it can leverage for future economic growth.

The LQ is calculated as shown below:

$$\text{Location Quotient (LQ)} = \frac{\text{Local Proportion}}{\text{State Proportion}}$$

The local and state proportions are calculated as follows:

$$\text{Local Proportion} = \frac{\text{Employees in the County in Industry X}}{\text{Total \# of Employees in the County}}$$

$$\text{State Proportion} = \frac{\text{Employees in the State in Industry X}}{\text{Total \# of Employees in the State}}$$

For example, there were approximately 1,049 employees in the “Education Services” industry in Lewis & Clark County in 2018. This cohort represents 2.2 percent of the County’s total 48,707

employees estimate in the same year. For the State, the share of the “Education Services” industry to total State employment was a mere 1.3 percent. Dividing the former number by the latter equals 1.7. This means that the “Education Services” industry is just over one and a half times as concentrated in Lewis & Clark County than it is in the State as a whole. An LQ of 1.0 indicates that the local concentration is in parity with the State.

Industries with LQ values greater than 1.25 are typically beneficial to the local economy because they become export-oriented, providing a good or service from the County that goes to customers outside of it. These industries not only provide jobs locally but also have a multiplier effect, creating jobs in other industries that are dependent on the concentrated industries. An LQ value that is below 0.75, on the other hand, is an industry that has very low concentration and is typically unable to serve local demand, resulting in a “leakage” of goods and services outside of the County.

SOURCE: BEA, Better City

Figure 16—Lewis & Clark Location Quotient Vs. Montana, 2018

The industries with the greatest concentration are “Educational Services,” and “Government & Government Enterprises.” These represent significant industry sectors to the County and should be viewed as the County’s economic base.

The industries which fall below the 0.75 threshold may have a regional disadvantage that needs to be mitigated. It may also represent industries that have room to grow and which could be supported by the local economy. Industries that fall far below the threshold often represent low-hanging fruit in terms of reducing economic leakage. These industries should be targeted first.

In the context of downtown Helena, what can be done to attract “export-oriented” firms or remote workers in educational services? Examples might include attracting going concerns or startups remotely-delivering services such as e-teaching, online coaching and tutoring, vetted lesson plans, developing curricula and technology for home-schooling, online research, proofreading, and educational games. These businesses could occupy office space in downtown Helena, their workers living in the new residences constructed along Cruse

Avenue. In addition, Helena could encourage its skilled workforce to pursue remote work opportunities in educational services. These remote workers could reside in new townhome products built along Cruse Avenue.

INDUSTRY CLUSTER MATRIX

Shift Share, location quotient, and wealth creation measures can be combined into a simple matrix that provides a more comprehensive view of the County’s economy. The method used in this report plots industries in a two-by-two matrix using normalized LQ estimates on the x-axis and the regional shift on the y-axis. The sizes of bubbles represent total payroll, a proxy for the industry’s wealth generation for the County.

The graph can be interpreted according to where the point is placed in comparison to the origin as well as the relative size of the point. The interpretation for each quadrant is listed below:

Quadrant One: Industries in this quadrant are concentrated in the region and are growing due to regional advantages. Large industries in this quadrant distinguish the regional economy as they increase workforce demand. Small industries in this quadrant are possibly emerging exporters that should be developed.

Quadrant Two: Industries in this quadrant are growing over time but are still less concentrated than the State average. Depending on the industry, it may settle at the State average or continue to grow and move into Quadrant One.

Quadrant Three: Industries in this region are less concentrated than State average and are losing ground relative to State growth. Such industries may face competitive disadvantages due to area factors.

Quadrant Four: Industries in this quadrant are declining but are still more concentrated than the State average. If a large industry is in this quadrant, the region is often losing its export base. The region should plan and invest accordingly.

The size of an industry (according to its relative wealth generation) is key to identify short-term economic impacts. Growth or contraction in industries with high payrolls will have a large impact on the local economy. Small industries will take time to have a significant impact. Smaller industries are usually dependent on the growth or contraction of the larger ones, so a trailing effect is common.

Most of the bubbles are clustered near the regional share (horizontal) line, signifying a lack of major expansion or retraction of these industries between 2014 and 2018. The main industry that had growth in compensation during the period is “Manufacturing.”

“Government” saw the largest drop in compensation during the period, and considering the size of this industry’s payroll, this contraction could lead to a more significant decline in the total economy as the multiplier effect ripples throughout the economy and into other industries.

SOURCE: BEA, Better City

Figure 17—Industry Cluster Analysis, 2014-2018

Cluster analysis indicates that Helena’s economic base lacks diversity and is heavily weighted in Government and Government Enterprises, which are not creative engines. Hence, government-related enterprises are unlikely to add substantial growth over the next 20 years or so. Moreover, Helena is not strong in most other sectors, indicating that there is not likely to be strong demand in the future for traditional office space in Helena which, therefore, might not be the best use of land, especially along a revitalized Cruse Avenue.

To grow Helena’s economy, it would be best to concentrate first on sectors where Helena has a comparative advantage, such as Educational Services. As noted above, developing new Educational Services in Helena might be the best workforce skill to leverage. Attracting entrepreneurs and adding new businesses and skills in Educational Services may also provide a core set of capabilities that could be transferable to other sectors, such as Information, Healthcare, and Other Services, which could be addressed in a second phase.

Revitalization of Cruse Avenue and associated improvements in the rest of downtown Helena could well be catalysts bringing entrepreneurs and new businesses to the area. They and their employees might well choose to live on Cruse Avenue and work in new kinds of office spaces downtown.

PROJECT ASSESSMENT

As a result of stakeholder interviews and data gathering, the project team developed preliminary options aligned with the goals and objectives of the community as well as market realities. The following is a synthesis of input from key stakeholders, much of which is in their own words:

PRELIMINARY OPTIONS

1. ROW Diet. Keep vehicular access but reduce the ROW; the avenue would be appropriately sized for traffic and would also add space for bike lanes, pocket parks, linear parks supported by some new residential product.
2. Linear Park. A more extensive change would be to have Cruse Avenue be a linear park, focused on bikes and pedestrians, supported by residences.
 - “What if we turned the whole street into a walking mall, cutting the street out entirely? Or at least part of it. We have this meandering street that could have green space, lots of trees, housing, small businesses. Do we even need Cruse to be a street?”
 - “Small cafes to create a neighborhood feel with patios...this would be something really unique.”
 - “A mixture of park, residences, and new amenities: Big Dipper, walk through the walking mall, occasionally into Fire Tower Coffee, sometimes to the farmers market. Something really good and affordable.”
 - “We have a great trail system just to the south of our redevelopment area. Could knit our urban landscape to our rural, mountain trail landscape. And this is affordable and doable.”
 - “1½-mile long urban park if we create a loop, connecting to pedestrian mall. Gives people a reason
3. Hybrid. The third option would be a combination of the ROW diet and the linear park. The area between Cutler Street and Broadway Street would be closed to vehicular traffic. Access to the Neighborhood Center would be reconfigured from an adjacent parking lot so the curb cut that is present along Cruse Avenue would not be needed. The other areas along Cruse Avenue would have a ROW reduction to accommodate pedestrian and bike traffic.

to be in downtown core. People could have a really nice half-hour walk through downtown.”

- “A bike-pedestrian greenway the length of Cruse Avenue.”
- “Divide the plan into digestible chunks—an overall plan with, say, four planning areas.”
- “Maybe two phases—a loose concept for each phase, test it, then fine tune each block.”
- “This might really change the dynamic of who might move to Helena.”

OPEN HOUSE FEEDBACK

Synthesis of comments – Public Meetings – Cruse Avenue

Options – Linear Park vs. Narrowed Street

“I believe the option that just narrows the street is much more palatable than the options that close it or part of it. Any time you make it harder to get around downtown - more people will avoid the area rather than deal with it.”

The three overall options were opened for discussion: 1) narrowing Cruse Avenue, 2) closing portions of Cruse Avenue to create a linear park, or 3) a hybrid approach. “These are ... terrific proposals. It would be great to draw more people downtown.” However, overwhelming consensus was expressed that narrowing Cruse Avenue seems like a more reasonable option

rather than closing it off for a linear park. Cruse Avenue is a really nice way to get around. Closing it would push traffic into adjacent areas that are not set up to handle large amounts of additional traffic. In other words, “although Cruse was originally created by mistake, we’ve gotten used to it being there and we like the convenience.”

There was general agreement that there is a lot of excess space along Cruse Avenue and redesigning it would be great, but folks are not excited about shutting off Cruse Avenue – particularly north of Broadway Street. To most it seemed that narrowing Cruse Avenue is more palatable than closing it or parts of it, although they agreed that a narrowed street should be able to handle the current traffic.

Comments included the following:

- Closing Cruse Avenue might be perceived as a psychological and physical barrier.
- The overall goal is to bring people downtown.
- One idea is to have fingers of access points from adjacent neighborhoods.
- The street intersections are not currently pedestrian-friendly.
- Another key reason for narrowing Cruse Avenue is to find locations to place additional housing downtown.
- We need to improve access to adjacent parks and trails, particularly Dale Harris and Fire Tower.
- Another issue is working through the utility connections and emergency vehicle access.

New Affordable Housing

A recurring comment received from stakeholders was that they were pleased to see that residential opportunities were being

provided as that fit with their philosophy of affordable, downtown living.

A stakeholder commented that this new housing, “should be attractive, nice, and not just an ugly row of boxes.” One added, “my parents would have bought a unit in a nanosecond to be able to walk to the library or go to lunch at RMDC.”

Affordable housing was of high interest, with general acclamation for the proposal showing several potential locations along a narrowed Cruse Avenue. The attendees were informed that development incentives could be pursued to assure that much of the housing would be affordable for residents yet profitable to developers.

Driving development of affordable housing would be market demand. Some observed that a townhome concept would be less expensive than single-family detached and could be done attractively. To maintain affordability of the new housing, the city would consider donating or selling the property to a land trust so people could only sell the house, which would keep the selling price more affordable. Moreover, it was stated that executing the project in phases “would be a perfect opportunity to test this out along Cruse.”

There are important questions to be resolved. How many new housing units are we talking about? How does the housing get built? Can the land remain with the city? Would revenue from selling the newly created lots go towards funding some of the project?

Neighborhood Center

“The Neighborhood Center is important for Helena’s seniors, Head Start students, and our entire community. Please don’t forget that, and if it comes to the building being demolished, please remember

that we have seniors, 60-plus staff members, classrooms for Head Start, and a preschool in this building. It will be difficult to find a replacement.” Another noted, “I do want to say is that this design looks very nice. I support it if we can find a good place to relocate the Neighborhood Center. Deciding that needs to be part of the process.”

The Neighborhood Center generated much discussion as it supports various programs, is a key downtown anchor, and is heavily utilized. Programs located at the Neighborhood Center include Head Start, RMDC Senior Center, Meals on Wheels, RMDC Housing Administration, Rocky Mountain Preschool Center, and Homebuyer Education.

Some thought we should simply consider leaving the Neighborhood Center alone. But it was then noted that the current configuration does not adequately meet the needs of the center’s constituents and due to the building’s age, renovation or relocation will have to be done at some point. Perhaps re-constructing across the parking lot would be optimal. The discussion led to the conclusion that relocation or re-construction of the Neighborhood Center is needed and should be considered as part of the project to reconfigure Cruse Avenue.

Parking

“This proposal looks very nifty,” said one, “but it seems to have a pretty big impact on parking spaces, appearing to dramatically reduce on-street parking.” There was a lot of discussion about parking, particularly regarding the need to consider possible impacts to on-street parking and on parking for any new housing. Several participants expressed concern about losing any parking or the need to recapture any lost parking for employees, visitors downtown, or school visitors. The perception is that there is not enough parking downtown and many view that as a critical issue.

Option 1, narrowing the street, would significantly add parking on both sides of Cruse Avenue at the south end. A detailed analysis of parking was conducted will be done as we move forward, particularly related to parking for the additional housing units (see subsequent analysis below).

It was stated that this could be mitigated perhaps by providing parking under the residence, either at or below street level. It was also mentioned that parking is an income source to defray the cost of maintaining on-street and covered parking downtown and the effect on those revenues should be considered. Some thought that, even at a high cost, “We should layer the parking rather than have it spread out. We should reduce our footprint.”

Key questions were raised during the open house: Do we know how many parking spaces will be lost – if any? Will the new housing units contain their own parking capacity? Mike Dowling, project architect responded that, “In the solution with the street included but narrowed, we will actually be adding parking on both sides.” See subsequent analysis below.

Impact on businesses

Several questions were asked regarding what effect there might be on the downtown business community. The response from the project team is that the goal is to be synergistic with businesses while considering parking. Bringing in more housetops would provide more customers for downtown businesses as well as places for some downtown workers to live. The intent is also to provide supportive services such as grocery or pharmacy.

Other

Among proposed amenities, several said that the amphitheater idea was great. The decision as to where to locate an amphitheater will depend on more detailed evaluation of

Commented [AH4]: No direct quotes were transcribed.

potential sites. It was urged that the project should incorporate saving the 7th Avenue Gym into whichever plan is adopted.

ADDRESSING OPEN HOUSE COMMENTS

Neighborhood Center

Follow-up conversations were conducted with RMDC, the sole tenant of the Neighborhood Center. While recognizing that a new building is needed to accommodate their programming, funding would need to be secured from the City and other sources to fund the project. Due to the uncertainty around funding availability, once the preferred alternative is identified, there would be two options included in the alternative: 1) to leave the Neighborhood Center as it is if funding is not secured, or 2) relocate RMDC to a new building constructed on the current parking lot of the Neighborhood Center.

Parking

Subsequent to the open house meetings, the project team conducted a parking analysis, counting the number of parking stalls that would be consumed by the proposed townhome developments and the parallel street parking created in the existing right of way. **The result was a net loss of 52 stalls, although this number is subject to change based on the final design.**

The observations of parking utilization was conducted on June 18th, 19th, and 23rd. The total number of parking spaces in the parking lots and along the streets which would be impacted by the envisioned redevelopment were calculated.

The observed parking utilization (see Table 2) showed that, on dates observed, there were between 267 and 311 spaces available, an average of 20 percent utilization of available parking.

		Parking Availability	Current	New Plan	Difference
Street Parking	Lawrence to 6th	49	50	1	
	6th to Broadway	62	51	-11	
	Broadway to Park	58	136	78	
	Street Total	169	237	68	
Parking Lots	Lot 6	36	0	-36	
	Lot 5	57	40	-17	
	Lot 10	57	31	-26	
	Lot 4*	41	0	-41	
	Parking Lot Total	191	71	-120	
Grand Total		360	308	-52	

SOURCE: Dowling Architects, Better City

Table 1—Parking Availability

		Parking Usage	6/18/20 @2pm	6/19/20 @10am	6/23/20 @12pm	Average Utilization		
Street Parking	Lawrence to 6th	22	45%	17	35%	16	33%	37%
	6th to Broadway	12	19%	7	11%	12	19%	17%
	Broadway to Park	9	16%	8	14%	13	22%	17%
	Street Total	43	25%	32	19%	41	24%	23%
Parking Lots	Lot 6	6	17%	5	14%	4	11%	14%
	Lot 5		0%		0%	7	12%	4%
	Lot 10		0%		0%		0%	0%
	Lot 4*	0	0%	41	100%	41	100%	67%
	Parking Lot Total	6	3%	46	24%	52	27%	18%
Grand Total		49	14%	78	22%	93	26%	20%

SOURCE: Dowling Architects, Better City

Table 2—Parking Usage

*Lot 4 has more than 41 spaces. In order to calculate a net gain or loss, only the total number of spaces to be displaced (due to new townhouses in the lot) were counted.

Although observations of parking utilization were conducted, the timing of these efforts coincided with the COVID-19 pandemic so the results would likely be significantly different under normal

circumstances. Additional observations will need to be conducted post-COVID.

With regards to how many spaces each unit would have, code would require that each townhome unit would have two parking spaces. This can be accommodated with tuck-under parking.

DRAFT

PREFERRED ALTERNATIVES USED AT OPEN HOUSE MEETINGS

Based on research and interviews with stakeholders, a comprehensive design for housing, pedestrian and bike paths, parks, and street improvements along the Cruse Avenue corridor have been developed.

SOURCE: Dowling Architects

Figure 18—Cruse Avenue between Park and Broadway— Current View

Commented [AH5]: Trailhead at the southend of Cruse to connect to Acropolis Hill and West Main area trails

Improve the pedestrian underpass to be more like the Lyndale underpass.

Funding for park maintenance - \$75k / year depending on final design.

alternative irrigation associated with the design such as an irrigation well and the use of native vegetation, where appropriate, the doesn't require irrigation.

There is a small trailhead at Dale Harris Park that would likely need to be relocated, along with the trail itself, if the new buildings are placed in that location.

Cruse Avenue from Park to Broadway - Option A

In Option A, Cruse Avenue is narrowed to add park strips, bike paths, pedestrian walkways, townhomes, parallel parking, pedestrian crossings, improved access to Fire Tower Park, and additional housing at the ME Anderson Apartments. Cutler Street is also reduced in width with added sidewalks and improved pedestrian safety at the intersection and crosswalk. In this example the Neighborhood Center remains in its current location.

SOURCE: Dowling Architects

Figure 19—Cruse Avenue from Park to Broadway— Option A

Cruse Avenue from Park to Broadway - Option B

In Option B, the Neighborhood Center is relocated on-site (new red building) and the existing facility demolished to make way for enhanced green space and connectivity between Cruse Avenue and the walking mall. This option will require additional community conversations among stakeholders regarding the new facility.

SOURCE: Dowling Architects

Figure 20—Cruse Avenue from Park to Broadway - Option B

Cruse Avenue from Broadway to Lawrence

Figure 42 presents the vision for Cruse Avenue between Broadway and Lawrence with streetscape improvements, pedestrian and bike paths, traffic calming measures such as bulb-outs at intersections and pedestrian crossings, dedicated pedestrian path from Cruse Avenue to Jackson Street, public plaza at 7th Avenue with downtown overlook, new neighborhood commercial developed on a portion of the City parking lot on the northwest corner of Cruse Avenue and Lawrence, new development at the former Independent Record site, and townhomes added to the corridor to create a sense of neighborhood at an appropriate urban scale. Parking for the townhomes would be provided by tuck-under garages accessed from Warren Street and Lot 4.

Figure 21—Cruse Avenue from Broadway to Lawrence

Figure 43 shows the proposed improvements in Option A for the entire project area, with the Neighborhood Center remaining where it now is.

SOURCE: Dowling Architects

Figure 22—Cruse Avenue from Park to Lawrence - Option A

Figure 44 shows the proposed improvements in Option B for the entire project area, with the Neighborhood Center being relocated on-site.

SOURCE: Dowling Architects

Figure 23— Cruse Avenue from Park to Lawrence – Option B

DRY

REFINED PREFERRED ALTERNATIVE

Map 3 - Broadway Street to 6th Avenue

Revisions from the prior alternative include 1) retaining vehicular access to the 2nd story of the Jackson garage, and 2) adjusting the width and alignment of Cruse Avenue and townhome lots at the lot 6 site to introduce a new alley that will parallel Warren Street and provide access to tuck-under rear parking for the townhomes in the rear.

Map 4 - Preferred Alternative with New Neighborhood Center

This alternative shows the proposed improvements along the length of Cruse Avenue and includes relocating the RMDC to a new neighborhood center where their parking lot is currently located. The new multi-story building would have tuck-under parking and vehicular access would be provided from the adjacent parking lot of the office building to the southwest. The building would have pedestrian access from Cruse as well as walking mall. This option assumes funding would be secured from the City and other sources to build the new facility.

Map 5 - Preferred Alternative with Existing Neighborhood Center

This alternative shows the proposed improvements along the length of Cruse Avenue and includes the RMDC remaining in the existing Neighborhood Center. This option assumes that funding from the City and other sources has not been secured for a new Neighborhood Center facility.

SOURCE: Dowling Architects

Figure 24—Envisioned Street View of Cruse Avenue

ACTION PLAN – TO BE FURTHER DEFINED WITH STAFF AFTER NEXT PUBLIC MEETING

- Consider a development model where the proposed townhomes could be a mix of market and attainable housing using a land trust model;
- Establish CC&R's or deed restrictions on the City property to be used for residential or commercial redevelopment to ensure suitable architectural and design standards will be met;
- Conduct outreach to performing arts groups to determine the demand and utilization of amphitheater space;
- Post-COVID-19, have a parking study conducted to determine the usage of lots along Cruse Avenue;
- Work with the School District and development community to adaptively reuse the 7th Avenue Gym to accommodate a productive and contributing use;
- Work with the adjacent property owners regarding the abandonment of rights of way along Cruse Avenue and Cutler Street to facilitate plan implementation and redevelopment;
- Consider infrastructure improvements to extend utilities to the planned redevelopment locations, making them shovel-ready;
- Conduct outreach and recruitment and engage the real estate development community to attract a small neighborhood grocer or pharmacy at the southwest corner of the intersection of Lawrence Street and Cruse Avenue;
- Conduct a Small Area Plan for the five-point intersection driven by redevelopment opportunities in Class A office and multi-family. Redevelopment could reconfigure the

existing blocks and create alignment with the grid system. This may provide a solution to the circulation issues.

- Advocate with State legislators for more impactful redevelopment and historic preservation incentives to facilitate enhancements to HTC's, TIF, and adoption of a State NMTC program.
- Explore developing and funding a new neighborhood center facility on-site that will replace the existing, aged facility. Stakeholder conversations should be continued to discuss programming needs, design, and financing.
- Engage an engineering firm to design street and utility improvements, allocate funding for construction.
- Determine ongoing maintenance costs for planned improvements

APPENDIX A – REVIEW OF PRIOR PLANS

DOWNTOWN NEIGHBORHOOD PLAN

Helena's Downtown Neighborhood Plan is a community-based planning effort that provides a guide for implementing changes that will attract future growth and development in Downtown. Following are key elements bearing on the Cruse Avenue project intended to develop a renewal vision for strategic areas in downtown Helena with a focus on Cruse Avenue.

Increasingly, people are choosing where to live based on quality of life over other factors, including higher salaries. At the same time, technology, and growth of "creative-class" industries, allow people and businesses to locate anywhere. Building a strong and resilient economy starts with creating a great community where people want to live and work.

The first phase in the development of the Downtown Neighborhood Plan involved identifying issues, barriers, and assets within Downtown. Key issues relevant to the Cruse Avenue project are:

- Connections to the greater community need to be strengthened.
- Business access and visibility is limited by a lack of wayfinding and through traffic.
- Pedestrian and bicycle routes lack continuity and connectivity.
- Parking is inconvenient and confusing.
- Current aesthetic and maintenance levels don't reflect the desired quality.
- Existing land uses don't support a desirable, walkable Downtown.

SOURCE: Greater Helena Area Long Range Transportation Plan, pg E.7

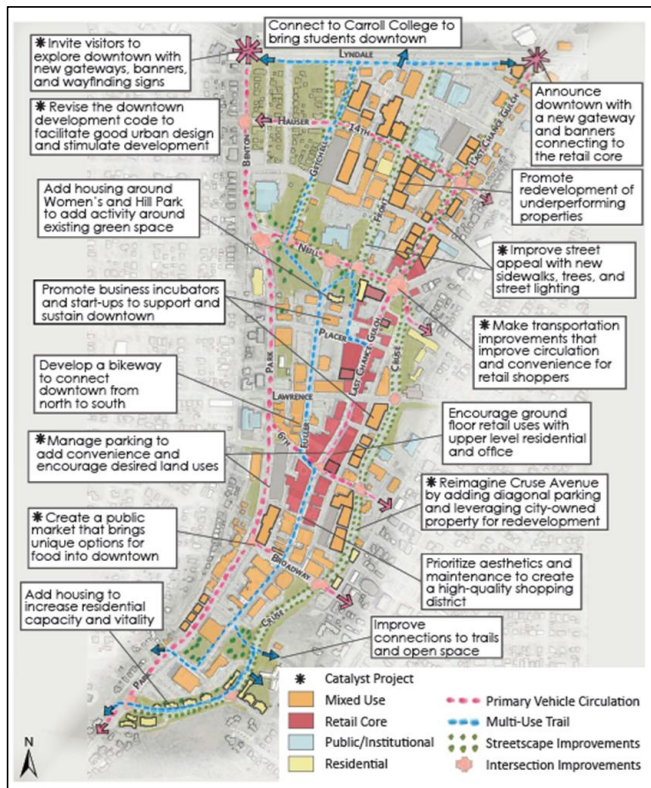

Figure 25—Walkable

The second phase formed the goals and vision for Downtown. Among guiding principles are:

- Downtown is walkable with a concentration of goods and services within easy walking distance. Walking in Downtown must be clean, comfortable, efficient, interesting, and safe.
- Downtown must be a vibrant, year-round destination for business and activity throughout the day and evening hours, including residential housing, arts and entertainment, events and activities.
- Downtown must have convenient access, circulation, parking, and every-day services that allow people to easily visit and stay Downtown.

Commented [AH6]: Staff to provide new picture.

The third phase established and prioritized implementation actions, shown in Figure 12.

SOURCE: Downtown Neighborhood Plan, pg 39

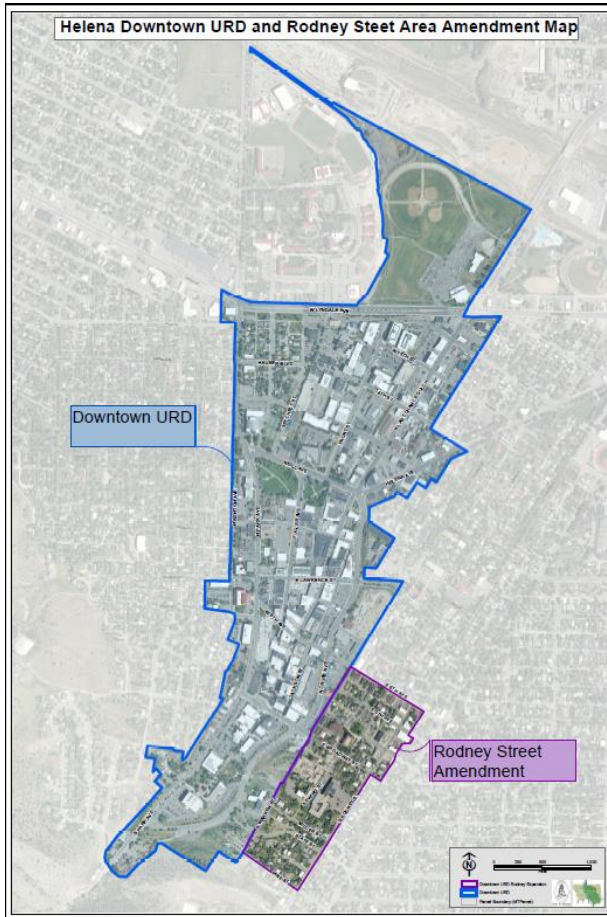

Figure 26—Implementation Action Steps

URBAN RENEWAL PLAN

The 2016 Downtown Urban Renewal Plan study area generally follows the Downtown Helena Business Improvement District (BID) boundary. The Plan Area is approximately one mile long stretching from Lyndale Avenue to the intersection of Park Ave. and Cruse Avenue to the south, and between Benton Ave. to the west and Cruse Avenue to the east, encompassing roughly 40 blocks. The Plan Area can generally be characterized as a mix of historic Downtown buildings, mid-century commercial development, and newer office and commercial buildings. Residential use is limited. Topography defines much of Downtown's physical layout, with steep hillsides narrowing to a tightly constrained gulch at the south end of the Plan Area.

A draft Statement of Blight was tendered 15 March 2018 in response to the recommendation in the Helena Downtown Urban Renewal Plan to demonstrate the area's suitability as an Urban Renewal District. It had been nearly 50 years since the last round of urban renewal projects was initiated in downtown and 15-20 years since most of the projects were completed. Even some of those improvements show signs of wear and tear. Designation as an Urban Renewal District provides the resources needed to rectify the serious deferred maintenance, deterioration, and the blight identified in the report.

The Statement of Blight established the need to undertake revitalization, detailing the blight factors that exist in the downtown study area (see Figure 13). The boundaries were established by considering the geographic extent of the 2016-2036 Downtown Neighborhood Plan, proposed downtown zoning district boundary, and discussion with City staff and stakeholders in the Helena Business Improvement District and Montana Business Assistance Connection.

SOURCE: [Final Downtown URD Boundary Map](#)

Figure 27—Downtown URD Area and Rodney Street Area Amendment

For designation as an Urban Renewal District, Montana State statutes require at least three of 15 blight factors; nine of those factors exist in Helena’s downtown. The statement concluded that the study area meets Montana statutory criteria for a blighted area and that rehabilitation and/or redevelopment of the area is necessary in the interest of the public health, safety, and welfare of the residents of the municipality, and without such rehabilitation, blighted conditions in the district are likely to worsen.

SOURCE: Statement of Blight Report, pg 18

Figure 28—Five-Points Intersection

The Statement of Blight identified issues with Cruse Avenue including the following, quoted directly from that report:

[Cruse Avenue] has a street layout with very long blocks. The on/off ramps where it intersects with Last Chance Gulch no longer make sense from a traffic perspective. The configuration of the Cutler St.-Cruse Avenue intersection is a similar issue. The Cruse Avenue-Broadway intersection is offset by a few yards from Warren Street to the east and a parking lot entrance to west (between Cruse Avenue and the walking mall). Long

crossing distances and lack of pedestrian striping across Broadway make this is a difficult intersection for pedestrians...

...[The] right-of-way for Cruse Avenue is wider than needed for the road [as originally designed as an interchange], particularly at the southern intersection with Park Avenue. This area is large enough to accommodate the road as well as development...

...Cruse Avenue has some of the highest accident rates in downtown. The Long-Range Transportation Plan recommends reconfiguring the intersection of Cruse Avenue and Cutler St. to reduce vehicle-pedestrian conflicts and improve sight distances. The intersection of Cruse Avenue and Broadway has crossing distances that are over 100 feet and issues with high speed vehicle turns....

...Some parcels along Cruse Avenue have less than clear legal standing, with parcels in the middle of the road [which may make disposition of properties for redevelopment challenging, an example is shown on Map 2]...

...Although most of the study area contains sidewalks, there are gaps along Cruse Avenue which disrupt the traditional street network that is conducive to walking. Furthermore, many existing sidewalks are too narrow to allow two people to walk comfortably side-by-side.

-(Statement of Blight excerpts from pages 19 -23)

Figure 29—Wide Street

SOURCE: Statement of Blight Report, pg 21

Map 6—Right of way at Cruse Avenue and Park Includes a Park-like Area

SOURCE: Statement of Blight Report, pg 24

Map 7—Parcels in the Middle of the Road

Downtown block sizes and shapes are irregular due to topography and historic development surrounding mining areas along Last Chance Creek. Cruse Avenue breaks up the traditional grid pattern and creates several long blocks of more than 700 feet.

Figure 30—Long Blocks on Cruse Avenue

Retail Market

Helena has an extensive trade area with a large high-income, well-educated population. The 2016 Retail Market Study, conducted by Gibbs Planning Group as part of the Downtown Neighborhood Plan found that Downtown Helena has an existing demand for up to 142,900 square feet of new retail development which could potentially produce \$46 million in sales by 2020. This new retail demand could be absorbed by existing businesses and/or with the opening of 45 to 60 new grocery, limited service eating, apparel and shoes, full services restaurants, general merchandise, and special food service establishments.

Demographic trends suggest empty nesters, baby boomers and millennials want to live near or in downtowns based on convenience of shopping and access to entertainment. Redevelopment opportunities abound in Downtown Helena.

There are many properties where the land value exceeds the value of improvements, indicated underutilized properties that could be good candidates for redevelopment. There are also city-owned surface lots that could be converted to new Downtown buildings with structured parking.

The City of Helena is situated among and near some of Montana’s best outdoor activities, including 900 acres of world class mountain biking, hiking, and wildlife viewing just minutes from Downtown. Within a short driving distance flows the Missouri River and several neighboring lakes.

These outdoor recreation opportunities are likely to attract potential residents of new housing constructed along a narrowed Cruse Avenue

Parking

While downtown charm is often based on walkability, convenient parking is crucial to the success of downtown businesses and the appeal of downtown housing. In Downtown, the off-street parking requirements for businesses can be met when a building/use is within 700 feet of a parking garage or surface parking lot. Seventy-five percent of permit spaces are being utilized, which may suggest there is an adequate supply of parking in Downtown.

Providing adequate ADA accessible parking is a challenge for the local government as well as local businesses due to existing conditions and topography.

The recommendations in the plan regarding off-street parking have been addressed as part of the Downtown District and Transitional Residential District zoning update that took effect in the past year. There are now design standards in both districts, and parking maximums have been established (e.g., no parking minimum requirements).

SOURCE: Data from the Downtown Helena Master Plan pg. 13-15, graphed by Better City

Figure 32—Parking Spaces

Circulation

Cruse Avenue is classified as a major collector on the MDT system; however, wide multi-lane streets that are favorable to cars negatively affect the walkability and scale of Downtown. One-way streets affect the viability of Downtown businesses.

Downtown designated bike facilities are limited to one east-west bike route that bisects Downtown on Lawrence Street. The

Commented [AH7]: Mike McConnell and Ellie Ray - see if these revisions align with the changes you wanted to see in this section.

Centennial Trail is an amazing amenity close to Downtown, but connectivity issues remain. One of the lanes could be repurposed for sidewalks, a bike lane, and safe, accessible parks. The area between Cruse Avenue and Park that was once intended for an overpass could be made available for housing.

SOURCE: Downtown Helena Master Plan pg. 13-15, Better City

Figure 33—Getting to Work

Infrastructure

As new development occurs, some gas and electrical lines may need to be updated or improved. Suitable sites for new utility locations are the primary constraint for utility providers. If large facilities are necessary, finding property to house those facilities could prove challenging. For smaller upgrades or expansions, tight spaces in alleys, between buildings, or in streets can also act as constraints.

In a study of gigabit broadband⁴, highest-ranked Montana cities are Billings, Great Falls, Kalispell, Missoula, and Butte. Helena, the

⁴ <https://broadbandnow.com/Montana>

75th most connected city, has considerable opportunity for improving internet service.

The storm drain system both accommodates urban drainage and conveys runoff from the large rural Last Chance Gulch watershed located upstream from the city. As such, there is a backbone network of large diameter pipes through the heart of Downtown, the majority of which is undersized or in poor condition and needs repair or replacement. Replacement of the storm drain poses complex construction issues because the existing pipe alignment runs near or under building structures in several locations. Replacement with larger diameter pipe also requires significant installation footprints, which can cause corresponding issues with water, sewer, and dry utility conflicts.

Vision for Districts In Proximity to Cruse Avenue

Last Chance Gulch: Retail core.

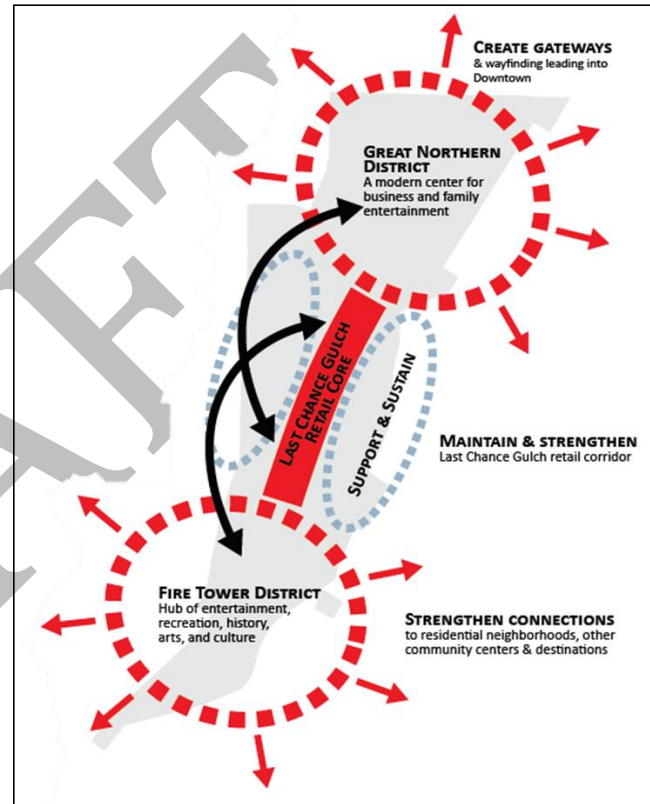

The Last Chance Gulch Retail Core invites Helena and its surrounding communities into the Downtown for a unique experience replete with notable, historic architecture, local shops and restaurants, and an active street atmosphere. A place that celebrates the traditional main street while overflowing with character and charm.

Wayfinding and Tourism, Information, Shared-Use Bike Lanes, Convenient, Nearby, Long-term Parking, Short-Term On-Street, Parallel Parking, Upper-Level Office/Residential, Active Ground Floor Retail, Low-Speed Two-Way Traffic, Street Trees/Furniture, Wide Sidewalks, Well Maintained/High Quality, Well Lit/Pedestrian Scale Lighting, Zero Setbacks, High Ceilings/Large Windows, Continuous Storefronts.

Fire Tower District⁵: Hub of entertainment, recreation, history, arts, and culture.

By embracing its eclectic mix of businesses and architectural styles, the Fire Tower District’s casual atmosphere welcomes the local and visitor to hang out in a brewery, meet up with friends before hitting the trails, or pick up dinner from a local vendor at the public market. Condos and townhouses that appeal to the millennial or baby boomer bring energy and demand for restaurants, outdoor gathering places, and cultural vibrancy. Desirable amenities might include:

- Public Market
- Employment,
- Eclectic, Active Lifestyle
- Retail
- Architectural Variety
- Art, History, & Performance Arts
- Townhomes, Condos, & Apartments
- Affordable / Workforce Housing
- Outdoor Seating
- Trails & Open Space
- Neighborhood Schools
- Gathering Places
- Restaurants
- Bars / Breweries

SOURCE: Downtown Helena Master Plan, pg 31

Figure 34—Downtown Districts

⁵ Cruse Avenue from Sixth Ave. to the Cruse Avenue intersection with Park Ave.

To create a dynamic downtown environment, the following were recommended and have been completed or are in progress:

1 – Revise the downtown development code

- Consolidate downtown zoning.
- Eliminate off-street parking requirements.
- Develop design guidelines (a menu of alternative solutions, including incentives).

2 – Promote redevelopment of underperforming properties

- Create a Tax Increment Financing District.
- Encourage ground-floor retail use.

3 – Encourage downtown housing

- Create a full range of housing affordability and options.
- Add housing around Women’s and Hill Parks.
- **Assess the feasibility of converting Cruse Avenue to a local street.**
 - The majority of Cruse Avenue carries less than 2,000 cars per day. Convert its wide right of-way for parking, trails, sidewalks, and landscaping. Explore opportunities to leverage city-owned property to create mixed-use housing and structured parking.
- **Create Cruse Avenue housing.** Eliminate the landscaped island to make room for condos and townhomes, with trails and open space in a walkable, urban neighborhood. Helena’s prosperity depends on available housing affordable to its residents. Many of Helena’s working population struggle with the affordability and availability of housing.

Figure 35—De-emphasizing Traffic

SOURCE: Downtown Helena Master Plan, pg 46

Figure 36—Create Opportunities for Development

Connect Downtown

All streets in Downtown should be two-lanes (one lane in each direction) with appropriate turn lanes at intersections. Current and projected traffic volumes fall well below the typical threshold for multi-lane streets. Intersections should be simplified to reduce crossing distances and right-turn slip lanes should be eliminated for pedestrian comfort and safety.

The pedestrian network should emphasize a finely connected grid that reduces out-of-direction travel and invites people to keep walking.

SOURCE: Downtown Helena Master Plan, pg 54

Figure 37—Sidewalk & Crosswalk

- Connect to neighborhoods
- Improve crosswalks
- Widen sidewalks
- Add lighting
- Improve street appeal
- Improve Cruse Avenue Streetscape
 - Add sidewalks, street trees, multi-use trail, and street lighting between Park and Broadway. Eliminate slip lanes and islands at Cutler St.

Figure 42—Proposed Pedestrian Circulation

Vehicle Circulation

Improve vehicle circulation and access to increase retail viability. Invite visitors to explore Downtown with new gateways, banners, and wayfinding.

SOURCE: Downtown Helena Master Plan, pg 61

Figure 43—Proposed Vehicle Circulation

Thanks to work with L&C City Public Health, pedestrian wayfinding now includes coordinating guide signs outside the Downtown, as well as bicycle and pedestrian-level signs.

Simplify the Five-Point Intersection

Although not part of the Cruse Avenue project, studying the feasibility of simplifying the five-point intersection of Neill, Last Chance Gulch, Helena, and Cruse Avenues, as recommended in this prior report, continues to be one of the few intersections in Downtown that experiences a poor level-of-service. Reducing the number of streets entering the intersection will improve operations, make the intersection more pedestrian friendly, and allow two-way traffic on Last Chance Gulch to the south. These changes will require meeting with business owners to address changes to Helena that would affect access.

SOURCE: Downtown Helena Master Plan, pg 62

Figure 44—Five-Points Intersection

The City of Helena commissioned and completed a concept study to evaluate the feasibility and constructability of a modern intersection at the five-point intersection. The evaluation included a full operational analysis and preliminary design of intersection alternatives. The primary goals of the effort were to establish a preliminary intersection design for the purposes of assessing right-of-way and infrastructure impacts, and for use in future final design efforts. The alternatives developed met the City's complete streets objectives to accommodate non-motorized traffic (pedestrian and bicycles). Recommended in the study were three alternatives for further detailed study in an appropriate environmental review process. The three alternatives were:

- Alternative 1B (single lane roundabout with two lane entry from Neill Rd),
- Alternative 6 (enlarged signalized intersection), and
- A "no-build" alternative.

The City is engaged in a study to address five-point intersections. For improvements to be delivered at these intersections in the future, a funding package will need to be identified and an environmental process completed to examine the social, environmental and economic impacts of the project on the community and businesses (if Federal funds are to be utilized).

APPENDIX B – STAKEHOLDER INTERVIEWS

STAKEHOLDER INTERVIEWS

Better City conducted forty-two interviews with a variety of key stakeholders regarding Helena’s downtown, with a focus on Cruse Avenue. These interviews provided insights on a variety of local perspectives regarding community issues, goals, and areas of opportunity for improvement.

SOURCE: Wordclouds.com, Better City

Figure 45—Interview Word Cloud

Major themes that were brought up during this week are shown in Figure 35. Quotes from the interviews are provided here, categorized by topic.

DOWNTOWN

“The whole downtown now seems a little uninteresting. A lot of downtown businesses don’t seem interested in modernizing—tiny little offices on the ground floor with old façades. Open offices and other current styles do not seem to get interest. One of the challenges our downtown has faced is that it is not a drive-through downtown. That is a good reason for why downtown is not working well. Back in the day (70s-80s), there were 20-30 restaurants so people would go downtown—if one happened to be full, there were plenty of others to choose from. Now, with fewer restaurants there is no longer the same draw.”

“Helena just can’t seem to figure out where its heart is. What we need is a vibrant downtown—a destination. What would make the central city unique, different, and attractive? Add parks, open spaces, a streetscape to have downtown feel differently. Include residential, parks, retail, commercial, restaurants (for lunch and dinner), breweries, and even street performers. These should all support each other—none would stand alone but they could all rise together. It would be good to be creative and expand the area of thinking beyond just Cruse Avenue.”

“We would like to see a community that is livable, enjoyable, a nice place to live or retire in. We must accept the fact that we need to create activities, shows, and give people reasons to go downtown.”

“We need to develop retail downtown in tandem with residential, so people have a place to walk to services that they want. Currently, if you want some basic necessities, you have to get into your car and drive half a mile elsewhere. Blend mixed-affordable housing with the historic feel of downtown; we are proud of our downtown’s history.”

“Bring back Last Chance Creek! Bring the creek back up out of the ground.”

BUSINESSES

“Every city needs a commercial tax base to survive. Residential taxes are not sufficient.”

“Downtown Helena used to have lots of small grocers, drug stores, and other retailers. It would be great if we would return to what Helena was like with a vibrant downtown. With a more attractive downtown we might be able to draw businesses to the area as well as breweries, wine bars, candy stores, a few little boutiques, restaurants, ice cream stores, and other boutiques, especially to replace ground-floor offices. We have no sustaining middle-of-the-road restaurants between \$10 takeout and \$30 per meal.”

“One would hope that a new level of quality would encourage the rest of the restaurants to update. If existing property owners could be shown that a minor investment could generate \$20/SF rents rather than \$12/SF, they might decide to upgrade the appearance of their facilities.”

“We are not talking about chains—we are looking for natural small businesses. One idea is incubator stores—try it for six months & stay if it works—most downtown landlords are willing to negotiate good entry prices for new stores who want to see if they can make it.”

“If the Shriner’s building went away, there would be a lot of land available and one could access the new building from both sides. There are also other very dilapidated buildings that should go. The State is not really a beneficial anchor tenant for creating a vibrant downtown, but it’s better to have them than not—otherwise buildings would be empty. They lease a lot of space downtown because of the low costs due to businesses having left.”

“Another challenge is the cost to redevelop older properties, which has inhibited renewal. The older downtown buildings are

way below standards. It is less expensive to raze them, but we don’t want to do that. We desire to maintain downtown’s historic perspective character.”

HOUSING, AFFORDABILITY

“Live, work, and play within the city limits. If we had a lot more people living in the area, grocery stores would want to move there, not necessarily big ones, but a bit better than a convenience store; people would like that. What makes a downtown grow? It’s local, really cool restaurants, perhaps like mini-Pike Place—which won’t happen unless we have demand there—so housing is fundamental. But, if we just put in homes but no places to walk to, it will only create congestion. We need a comprehensive design—housing, retail, parks, and so forth. The big problem is to get people to go to areas where have to build higher rather than duplexes. The shortage of housing is being filled by projects outside of downtown. A lot of talk but not much traction due to high costs, particularly for affordable housing—organize a plan with staged development, partly to test the market before spending all at once.”

“We need a variety of affordable housing. On Cruse, one could aim for a market of people wanting to downsize and move downtown—townhouses at \$250k-\$300k or so. Another group would be young people who struggle to obtain housing in today’s market. We don’t really have many wealthy people, not much high-income demand. But there is an opportunity: folks of middle-income levels might be looking to downsize and move to more convenient areas. We believe that there is demand for smaller homes with amenities within easy walking distance.”

“We would like to see affordable housing to get more people living downtown. We need to look at whole picture. Affordable housing will require walkable amenities like grocery stores.”

“The impediments, having identified the sites, are to obtain subsidies, to find developers we can approve, and match to market values that people can support. So far, the economics just haven’t been there. There have many people talking about housing downtown and there are good lots available, but we just have not been able to get the funding. To build anything right now, it would have to be subsidized. Some developers would consider building more downtown, but they haven’t been able to make the construction costs work—even if the city gave the property away for free. Income-restricted housing rarely gets built without some kind of subsidy—one would hope we could find sufficient blight to justify government assistance. Section 42, for example, allows a developer to do restricted-income and market-rate in the same place. There would be openness to Townhomes on Cruse Avenue, which would be a good alternative due to lot depth constraints.”

“There is pent-up demand, but we need to find subsidies. When one starts adding elevators and covered parking and seeks to be Class A property, one cannot come close to the prices folks are willing to pay. And we don’t have good data on what people are willing to pay. We also need housing that is affordable for the workforce, which also includes low-income-affordable so that people who work at the restaurants and retail stores can afford to live downtown. Probably small apartments with mixed use, but also some larger units. One-bedroom units for \$500-\$600/mo. For teachers, workers, library people. “Affordable” includes both owning and renting.”

WALKABILITY, SIDEWALKS

“The biggest problem of downtown is connectivity. Downtown needs to be focused more on pedestrians, particularly with additional housing and other changes that would draw people downtown. If downtown is going to be developed, people who live

there want it to be walkable. For others, we need to come up with things that will attract them and get them to be willing to walk.”

“The majority of Helena has no sidewalks nor bike lanes. Let’s think ahead 50 years and design for where we should be going. In downtown, we don’t see families using the sidewalks today. The sidewalks are terrible. How can we improve pedestrian access so Cruse Avenue is not a barrier? Currently one is often facing walls and parking lots. There is not much of a neighborhood feel. And we need a lot more trees.”

Figure 46—South End of Cruse Avenue – Satellite Image

SOURCE: Google Earth

BIKES, TRAILS

“There is a lot of support for walkability and bike-ability. It is important that this project connect with the people living in the surrounding neighborhoods. Let’s make downtown a spot for people to walk to or ride their bikes to. Everyone would benefit if

could integrate biking and tourism plans into community plans. From Cruse Avenue one could see a connection to the waterline trail and to the upper ridges.”

“We have a great system of trails, a really good system of trails for mountain bikes, and we are looking to build trail capacity state-wide, reaching out to large Montana-based donors (companies and institutions). Indeed, Helena seems to be becoming a hub for biking activities, now with a silver rating, and we are trying to get a gold rating. For serious bikers, Helena is viewed as similar to Moab, but we don’t want to end up like Moab.”

PARKING

“The Parking commission has an analysis of every parking place which shows that usage rates are low going even a few blocks outside center city. There are tons of free parking downtown as long as one doesn’t mind walking a block or two compared to Costco or Walmart. However, parking is often mentioned as an issue: if one is developing a condo, for example, most buyers would probably demand covered parking.”

TRAFFIC

“Traffic is not easy to flow through. For example: Last Chance Gulch is one-way. Many enjoy streets that are two-lane. They are more dynamic. You see buildings differently. One would love not to see more one-way streets.”

CRUSE AVENUE

“Cruse Avenue has the opportunity of becoming part of a beautiful loop that exists nowhere else. One’s mind goes to green spaces and trees, places for people to hang out, connectivity to retail spaces. There is a lot of wasted potential throughout Cruse—a dog park, farmer’s market, parks with benches, playgrounds, places to leave cars so we could ride to trails.”

“Cruse also needs to accommodate new housing. There are tons of city lots along Cruse Avenue. We would have to find a way to build parking structures to replace existing surface parking. Right now, there’s a breakpoint on Cruse at Broadway. South of there is almost no traffic. If we put in 20-30 homes, that would be great. Moreover, with single-depth town homes, one could get 30-40 homes in. But let’s not go to high-density housing.”

“Cruse Avenue was originally intended as a freeway on-ramp. Now, Cruse is just a place to get through—an unfortunate solution to a problem that never happened. We have a sea of asphalt that was brought with Cruse Avenue. Cruse should not be viewed as the new downtown but could be viewed as the backyard to downtown—to complement Last Chance Gulch, and not replace it. If anything were built at the lower end of Cruse Ave, that would become the south end of downtown.”

SOURCE: HelenaR.com

SOURCE: Dowling Architects

Figure 47—South End of Cruse Avenue – Sketch

“We need more green space on Cruse. You’re up there above a beautiful view. We could create a streetscape on Cruse—there is great opportunity there. Cruse Avenue is a whole lot of blacktop. If re-purposed, there could be room for housing fronts, bike paths, pedestrian walkways, and parks. This portion of Cruse Av is a big opportunity for housing, reshaping rights of way, utilizing some of the existing parking lots.”

“What about a connected greenway with bike and pedestrian access? Could Cruse Avenue become a modified bike trail? Throw in some bocce ball and horseshoe pits and a greenway that could provide access to other parks in the area. Still missing are a lot of little pieces of connectivity like stairways and ramps up to Cruse street and a separated pathway. There is a neat opportunity to

reduce the width of Cruse, which would allow a linear park at the base of the fire-tower hill. Cruse is wide enough to be a tree street.”

“To upgrade the Cruse area, there will need to be substantial subsidies for anyone to be willing to develop it. The city owns a good part of the land, so could be a catalyst for changing. In the middle part of Cruse, there is also great potential if we look at it with open minds to revitalize in a way no other city can do. Cruse is a pretty, elevated street.”

SOURCE: [tripadvisor.co.za](https://www.tripadvisor.co.za)

APPENDIX C - POLICY RECOMMENDATIONS

Stakeholder interviews included consistent comments from the real estate development and brokerage communities that redevelopment and historic preservation in downtown Helena does not pencil out which is why investment is not occurring. Conversely, some communities in other parts of the country are seeing significant investments occurring in their historic downtown areas. Appropriately aligned incentives, or the lack thereof, is a major contributing factor giving rise to these discrepancies in private sector investment among communities.

The following information is intended to provide City leadership with an understanding of potential solutions that could be pursued. The solutions contemplated are incentive programs adopted in other states, most notably Ohio, that are designed to fill financing gaps to facilitate private sector investment. Such proven programs, if adopted by the State of Montana, would result in a virtuous cycle of investment in Helena's historic downtown.

State Historic Tax Credits

The Federal government has several incentives that have been established to facilitate investment in historic buildings as well as distressed census tracts. "The Federal Historic Preservation Tax Incentives Program, commonly known as the Federal Historic Tax Credit program, provides a 20 percent federal tax credit to property owners who undertake a substantial rehabilitation of a historic building in a commercial or other income producing use, while maintaining its historic character... State Historic Preservation Offices are the first point of contact for information

⁶ <https://www.nps.gov/orgs/1207/htc2017.htm>

⁷ <https://www.novoco.com/resource-centers/historic-tax-credits/htc-basics/about-historic-tax-credit>

and guidance for property owners interested in the program, and the National Park Service works closely with them in the administration of the program."⁶

Most state tax credit programs mirror the national program, although often with different percentages. A building owner generates credits by completing a certified rehabilitation on a qualified rehabilitation building."⁷

"The State of Montana's income tax credit is equal to 25 percent of the amount an owner claims under the Federal program. Those wishing to claim the state credit must first be certified for credits under the Federal program."⁸ Essentially, the State's program provides for only 5 percent (25 percent of 20 percent = 5 percent) of a project's Qualified Rehabilitation Expenditures. Compare that to the State of Ohio, where the historic preservation tax credit is 25 percent of QRE's - even higher than the Federal program. Although many stakeholders expressed the desire to save and preserve historic structures such as the 7th Avenue Gym and the Historic Ming Opera House, the amount of incentive that is available through the State does not make a material impact on the ability of the development community to undertake these community-supported projects. The City should consider advocating for an increase in the State's rate of participation in historic preservation.

State New Markets Tax Credits

Another Federal program, called the New Markets Tax Credits Program, "attracts private capital into low-income communities by permitting individual and corporate investors to receive a tax credit against their federal income tax in exchange for making

⁸ <https://mhs.mt.gov/Portals/11/shpo/docs/Incentives.pdf>

Commented [AH8]: Mike McConnell - do you want me to take this entire section out or leave it in as an Appendix?

This quantifies the anecdotal comments from the developers and brokers we interviewed that redevelopment and historic preservation doesn't pencil out, which is why it isn't occurring. TIF is not a panacea, there needs to be policy changes at the state to create additional economic tools if Helena wants to create the conditions for significant investment occurring in their downtown.

equity investments in specialized financial intermediaries called Community Development Entities (CDEs). The credit totals 39 percent of the original investment amount and is claimed over a period of seven years.” CDEs, in turn, use the proceeds of these QEIs to make Qualified Low-Income Community Investments (QLICIs), such as business loans, in Low-Income Communities.”⁹ Loans can be provided to real estate projects, including combined with those utilizing historic tax credits. Although extremely complicated, these tools can be used to materially impact the capital stack for developments.

The City should advocate for the State to adopt a State New Markets Tax Credit program. Although the market will be thin in terms of tax credit investors, with two regional banks and three national banks comprising the investor community in Montana, there is still a market. A State New Markets Tax Credit program can be designed to function in parallel with the Federal tax credit. One possibility is to provide for a \$2,564,103 tax credit allocation cap for each project, 39 percent of which would equate to \$1.0M of tax credits. Assuming a syndication rate of 65 percent, a project could receive \$650k in QLICI funding. This could be another valuable tool for CDE’s in the State of Montana to facilitate investments in distressed areas such as Helena’s downtown, patterned after Ohio’s program.

Tax Increment Financing

The State provides municipalities with the ability to establish an Urban Renewal Area (after meeting certain statutory criteria) and allow tax increment to be used to fund public infrastructure and façade improvements. However, according to stakeholder interviews, many projects lack economic viability not because of

the costs of infrastructure and façade improvements but because of the cost of land, demolition, and vertical construction costs. The City should advocate for the expansion of tax increment to include these costs.

PRO-FORMA EVALUATION

Assume for purposes of illustration a \$25M rehabilitation project where there is little cost associated with public infrastructure or façade improvements. The hurdle rate for investors is a 10 percent cash-on-cash return, meaning that if the project doesn’t generate 10 percent on the equity invested, the investment will not occur. The project will produce \$1.0M in net operating income, a measure of cash flow before debt service is paid. Assuming traditional financing, which typically requires a 35 percent equity contribution, the project would generate a negative return as show in Table 3. The debt service is too high to produce positive cash flows.

Sources	Amount	% of Total
Commercial Debt	16,250,000	65%
Equity	8,750,000	35%
Total	25,000,000	100%
Net Operating Income	1,000,000	
Debt Service	(1,197,471)	
Cash Flow Before Taxes	(197,471)	
Cash-on-Cash Return	-2.3%

Table 3—Pro-Forma without Incentives

⁹<https://www.cdfifund.gov/Documents/2017%20Introduction%20to%20NMTc%20Program%20Presentation%20For%20Release.pdf>

Assume the same project, now with the Federal HTC and NMTC programs. The amount of equity required is reduced to \$6.06M but the return is still 0 percent. Although the debt service has been reduced, it must be reduced further, and the amount of equity required to fund the project must also be reduced to meet the investor hurdle rate. Although the project is utilizing the Federal HTC and NMTC programs, the costs of meeting historic preservation standards and tax credit financial and legal structuring consume a lot of the economic benefit of these programs.¹⁰

Sources	Perm	% OF TOTAL
QLICI Loan A	11,008,000	44.0%
QLICI Loan B	4,992,000	20.0%
Equity	6,063,584	24.3%

SOURCE: Better City

Table 5—Pro-Forma with Federal & State Incentives, & TIF

Although creating a capital stack with these programs is plagued with complexity, it can make projects that otherwise would not be feasible attractive to the investor and developer community. Investment in downtown Helena and other distressed areas of the City and State can be greatly facilitated by aligning policy to address economic shortfalls that have been impediments to development.

DRAFT

APPENDIX D – HISTORICAL ARTICLES

BYPASS ALTERNATIVES UNVEILED – 1 DEC 1977

The Independent-Record, By Angus White

A Helena citizens group presented a list of alternatives to the proposed south bypass during a meeting Wednesday with the Area-wide Planning Organization.

The group, representing a cross section of Helena neighborhoods, was formed Nov. 14 to more clearly voice community support or opposition to certain projects that will affect their neighborhoods. The group decided its first project is to tackle the south bypass issue.

Group members agreed to poll their neighborhoods, seeking alternatives to a south bypass. Results of that poll were presented Wednesday to APO director Denis Vogt and planner Lisa Anderson.

Highlights of the opinions voiced by residents on the upper west side are:

- No bypass.
- If the bypass is needed, place it south of Mt. Helena and not close to any residential neighborhood.
- Use existing east-west streets to channel traffic.
- No road should connect the central business district by spanning Park Ave. or Cruse Avenue
- Complete the development of Euclid and Lyndale avenues to the Burlington Northern depot and along the railroad tracks to Interstate 15.
- Develop a bypass to the north over open land one-half mile from any existing neighborhood. Plan to build north-south roads into the downtown and Capitol areas.

Residents polled on the upper east side of Helena came up with these and other alternatives:

- Establish a bus system to serve the downtown area including the new federal building and also the State Capitol complex.
 - Provide new access roads to connect new southeast growth areas with the downtown area. These roads should not be an east-west bypass and should not disrupt existing neighborhoods.
- Residents polled in the Prospect Heights area came up with these ideas:
- Before a subdivision is approved, consideration should be given to its impact on existing neighborhoods by requiring an environmental impact statement.
 - A collector street connecting the proposed Frontage Road along Interstate 15 should be tied in with present Highway 12.
 - Put a green arrow for a left turn from Montana Avenue heading north on the 11th Avenue heading west.
 - All future construction of state-owned buildings should take place east of Interstate 15. This would ease congestion which exists in the Capitol area.

Residents in the northeast area of the Sixth Ward were presented with a survey. Of the residents polled, 30 percent favored a south bypass while 20 percent opposed it.

A moratorium of proposed subdivisions (east and west) until the transportation problem is settled was favored by 36 percent of those polled while 14 percent opposed it.

In addition to Wednesday night's proposed alternatives, members of the APO staff presented 10 alternatives derived from suggestions from the Helena Citizens Council (HCC) transportation subcommittee, members of the HCC and members of the neighborhood group.

They are:

- Build a new road one-half mile south of the areas where housing presently exists.

- Bring the proposed Frontage Road into the Prospect Avenue intersection by swinging it around the Colonial Inn from Bull Run.
- Stagger working hours for federal building and Capitol complex employees to alleviate traffic congestion on Last Chance Gulch and in the Capitol area.
- Decentralize state government.
- Make Broadway and Winnie one-way streets.
- Put traffic controls, stop signs, barricades, and time signal devices on affected streets.
- Initiate alternative transportation: bus systems, off-street bikeways, carpooling or trolleys.
- Design and plat a grid street system on the undeveloped land that development proposals would have to conform to.
- Control growth.
- Build a roadway which would run from the downtown area via State Street, from Cruse Avenue to Diehl Drive with a jog around Sugarloaf Mountain.

The APO staff is working toward a December deadline set by the City Commission to come up with a new study updating the city's transportation plan and to resolve the south bypass issue.

The APO and neighborhood group alternatives will be presented Dec. 7 to the HCC transportation subcommittee, which will in turn present the alternatives to the City Planning Board Dec. 20.

And if progress goes smoothly, Bogt said, the APO will take the City Planning Board's recommendations on alternatives to the Jan. 9 City Commission meeting.

CITY MAY BE TIED TO SOUTH BYPASS – 29 NOV 1977

The Independent-Record, By Ellen Burks

The City of Helena may have made a commitment to a major east-west arterial to qualify for urban renewal funds back in 1967.

And if the commitment is clear, and the arterial is not built, the city may be open to a potential suit by the Federal Department of Housing and Urban Development.

This information was presented to City Commission Monday night by areawide planning staff member Lisa Anderson as part of the update on the transportation study. She did her research after neighborhood groups questioned if a commitment to the bypass had already been made.

But City Manager Al Thelen and City Attorney C.W. Leaphart Jr. say they have serious doubts about whether such a commitment exists.

In her memorandum Anderson says, "Essentially, the commitment to a roadway and bridge over Park Avenue appears to have been made by the City in order to ensure adequate access to the downtown and thus, to qualify for funding of the downtown Urban Renewal Project by (HUD)." The city received some \$16 million in federal urban renewal money, according to a former director.

City attorney Leaphart said today, "I really don't know what commitments we have (to the bypass). I don't think we have any - or at least not as much as she (Anderson) wants to make it appear."

Commissioners, taken surprise by the memo, decided promptly to table the study until they receive a full staff report and written legal opinion.

They were clearly shocked by the information and placed in an uncomfortable position. The commission has attempted to convince the public that they are searching for alternatives to the south bypass, and Commissioner Jim Nybo has repeatedly assured groups that no commitment to any one plan has been made.

He compared the report to "dousing a fire with gasoline." About 70 residents concerned about the bypass were present at the meeting to hear about the progress on transportation plans. Mayor Kathleen Ramey sternly instructed them that the memo would not be discussed at the meeting.

Commissioner Russel Ritter expressed his irritation with the new surprises that keep arising in the transportation plan. “Every time we turn around something sneaks out of a corner – and I’m tired of it, personally.” Loud applause greeted his remark.

In her presentation, Anderson noted that as recently as 1975, the Environmental Impact Statement for the Federal Office Building and the Court House referred to transportation plans.

“...Long-range plans (projected 1985) contemplate an overpass where Jackson Street (Cruse Avenue) and Park Avenue intersect south of the proposed site. This overpass may eventually link Jackson Street (Cruse Avenue) and Le Grande Boulevard to the west, providing good east-west access. Broadway provides east-west access at the present time but only up to Park Avenue where it ends.”

She pulled additional statement from the 1967 planning proposals and reports for Urban Renewal in the downtown area.

“It has long been recognized that the existing traffic system creates a ‘dead end’ situation for the project area, and local objectives were established to

eliminate the problem. The Urban Renewal Plan accomplishes this purpose by permitting the establishment of a new east-west arterial.”

City Manager Al Thelen says that some commitment was made to the federal government that employees would be able to get in and out, and that there might be an overpass. “But the idea that we have an obligation to build a south bypass is as phony as a seven-dollar bill.”

City Attorney Leaphart says he told Anderson that if there is violation of the HUD agreement on urban renewal, “we may be subject to some kind of litigation.” But he assumes that HUD would have mentioned the problem when the urban renewal project was completed this year.

“I think they’ve been pretty satisfied with us. This is just an engineering thing. As long as you accomplish what you’re trying to do and have ingress and egress, you can change the design or scheme. Cruse and Park are the boundaries of the plan and if we have good traffic flow, then we have accomplished what is necessary.”

APPENDIX G – PUBLIC OUTREACH SURVEY

A majority of Helena’s population desires to preserve the historic character of the downtown area while adding more landscaping, trees, and parks. There seems to be a general impression that more parking is needed, but that might be mitigated by increasing walkability and bike lanes, which are also desired.

A third of residents would like to see more housing downtown and more than half would live there if conditions were improved. New development is welcomed, not only for improved shopping and entertainment, but also to improve business health.

APPENDIX H – TRANSPORTATION PLAN RECOMMENDATIONS

Recommendations Relative to Cruse Avenue from the Greater Helena Area Long Range Transportation Plan—2014 Update

Project ID	Location	Problem	Recommendation	Estimated Cost	Other Project References
MSN-27	6th Ave. – Cruse Avenue to Montana Ave	Roadway surfacing deterioration and increasing traffic volumes.	Reconstruct 6th Ave, between Cruse Avenue and Montana Ave, to City complete streets standards. This portion of 6th Ave. has been identified by the City for reconstruction (per Fall 2014 citywide inventory).	\$2,299,000	PED-25; SPOT-7; BL-31
MSN-28	11th Ave. – Cruse Avenue to Montana Ave	Roadway surfacing deterioration and increasing traffic volumes.	Reconstruct Carter Dr, between Prospect Ave. and Billings Ave, to City complete streets standards. This portion of Carter Dr has been identified by the City for reconstruction (per Fall 2014 citywide inventory).	\$968,000	BL-9
TSM-22	Intersection of Neill Ave, Helena Ave, Cruse Ave, & Last Chance Gulch	Traffic congestion; lack of suitable non-motorized infrastructure; business parking and access concerns.	The City had a concept study completed to evaluate a modern intersection at the Neill Ave/Helena Ave/Cruse Ave/Last Chance Gulch intersection. The study included a full operational analysis and preliminary design of intersection alternatives. The alternatives developed met the City’s complete streets objectives to accommodate non-motorized traffic. The recommendations included three alternatives for further detailed study and an environmental review process. Alternative 1B (single lane roundabout with two lane entry from Neill Rd), Alternative 6 (enlarged signalized intersection), and a “no-build” alternative. The City Commission elected to drop the project from additional consideration and allocate available City funds to the West Main St reconstruction project. For improvements to be delivered at this intersection in the future, a funding package will need to be identified and	\$4,719,000	MSN-3; BBL-2; CT-2

Project ID	Location	Problem	Recommendation – Continued	Estimated Cost	Other Project References
			an environmental process completed (if Federal funds are to be utilized).		
TSM-31	Cutler St. & Cruse Ave	Vehicle-pedestrian conflicts; sight distance concerns; vehicle speeds.	Reconfigure intersection to reduce vehicle-pedestrian conflicts and improve sight distances. Additional engineering study is needed to identify possible mitigation measures to improve safety at this intersection.	\$93,170	
PED-22	Southwest corner of Cruse Avenue & Broadway	Existing crossing is over 100' in length and allows for high speed turning of vehicles.	Install "pork-chop" style refuge to separate crossing into two stages.	\$9,000-\$16,000	
PED-23	West leg of Cruse Ave & Broadway	Existing crossing is over 110' in length and allows for high speed turning of vehicles.	Add bulbout due to high traffic on Broadway; bulbouts should not block potential for bike lanes. The southbound slip lane from Broadway to Cruse Avenue should be removed with this project.	\$1,200	
BL-12	Cruse Ave from Broadway to Neill Ave.	This road is one of only two downtown roads that go north-south. (0.49 mi.).	Beginning at Broadway headed north, convert angled parking to back-in angled parking. Mark all spaces as 'compact cars only' to prevent encroachment into the bike lane. The following cross-section is proposed: 8' parallel parking, 6' bike lane, 11.5' travel lanes, 6' bike lane, 15' reverse angled parking lane. North of Broadway the road is currently a 3-lane section, 58' wide, with parking. Proposed section would include: 8' parking lanes, 5' bike lanes, 11' travel lanes, and a center turn lane/striped median. From 6th Ave. north to Neill Ave, the center turn lanes could be removed as there is not significant volume (less than 2,000 ADT). Buffered bike lanes could be accommodated with 8' parking lanes, 2' parking buffers, 5' bike lanes, 2' travel lane buffers and two 12' travel lanes.	\$5,000-\$52,000	

Project ID	Location	Problem	Recommendation - Continued	Estimated Cost	Other Project References
BL-33	Park Ave from Oro Fino turnout to Cruse Ave	Park Ave. is the gateway to many popular trails in the south hills, but has no dedicated bicycle facilities. Formalized bicycle accommodation would make this journey easier and encourage riding to trailheads. (0.5 mi.).	Install bike lanes. From Reeders Village Dr to Cruse Avenue there are two options: Option 1: Remove center turn lane and provide wide bike lanes. Width is 55' curb-to-curb. Recommend 8' parking lanes and 6.5' bike lanes. Option 2: Climbing bike lane only to include 8' parking lanes, 5' climbing bike lane, center turn lane and 12' travel lanes (with the downhill travel lane containing sharrows). South of Reeders Village Dr recommend bike lane in uphill direction only. Shared lane markings in downhill direction	\$6,000 - \$25,000	
SHR-1	Park Ave. Bike Sharrows from Cruse Ave to Broadway	Street configuration is not compatible with bike lanes (0.32 mi.).	Option 1: Place sharrows in center of travel lane with frequent 150-200' spacing. There is high turnover parking on this route, so bike lanes may not be the most desirable. Option 2: Provide uphill bike lane and downhill shared lane, 5' bike lane behind reverse angled parking (no bike lanes should be behind front-in angled parking), 8' parallel parking, and two 12.5' travel lanes. Option 3: 10' travel lanes, 8' parking lane, and two 5' bike lanes.	\$3,000-\$34,000	
SPOT-26	Southwest corner of Cruse Avenue & Broadway	Pedestrian crossing is wide, and the existing slip lane allows for high speed turning by vehicles.	Remove slip lane and provide curb extension over the previous extents of the slip lane.	\$10,000-\$15,000
